MEMORANDUM

From: Peter E. McGrath

To: Clayton Bushong  
David Severn

REM  
meg

Subject: Prowl

Baylor  
File Prowl 8-4-80

I am returning the subject memorandum on Prowl. This memorandum, which is in response to Akermen's note of July 8, 1980, needs to be a joint response from EFB and EEB.

The issue of a field monitoring study has to be resolved and, if required, recommended by EFB. I would like EFB to reexamine the environmental chemistry data on Prowl before making any appropriate recommendations. The degree of our concern with the mobility of Prowl in the environment and its persistence should be viewed relative to its very low level for reproductive effects in fish.
