

DATA EVALUATION RECORD

1. CHEMICAL: Metolachlor [108801]
2. FORMULATION: Technical
3. CITATION: Sachsse, K. (1977) Skin Sensitizing (Contact Allergenic) Effect in Guinea Pigs of Technical CGA-24705. Project No. Siss 5726. Received October 17, 1977. [Unpublished Report Prepared by CIBA-GEIGY Ltd., Basle Switzerland].
4. TRADE SECRET CLAIM: Yes
5. REASON FOR REVIEW: Generic Standards for Metolachlor
6. REVIEWED BY: Carolyn Gregorio
Biochemist, Metabolic Effects Branch
Criteria and Evaluation Division
7. DATE OF REVIEW: January 24, 1978
8. TEST TYPE: Dermal Sensitization Study

A. Materials and Methods: Two groups of twenty [10 males, 10 females] guinea pigs of the Pirbright white strain. The test animals received a total of 10 intracutaneous insult injections [0.1 ml] of freshly prepared 0.1% dilution of technical metolachlor in propylene glycol [test group] or 10 intracutaneous insult injections [0.1 ml] of propylene glycol [control group].

Two weeks following the last insult injection the animals received a challenge injection [0.1 ml] of freshly prepared 0.1% dilution of technical metolachlor in propylene glycol [test group] or propylene glycol [control group].

B. Reported Results: Dermal Reactions after intradermal challenge injection:

<u>Formulation</u>	<u>Treated Animals</u>	<u>Positive Reaction Animals</u>	<u>P value**</u>
Propylene Glycol	20	5	—
Technical + Propylene Glycol	20	16	0.001*

*A probability of 0.01 was considered to indicate a significant difference.

**The exact fisher test for comparison of the basic probability of two binominal distributions; L. Sachs, Statistische Auwertungsmethoden, Thime Verlag, Stuttgart, 1971.

- C. Discussion: No discussion necessary.
- D. Conclusion: Technical metolachlor is a skin sensitizer in albino guinea pigs.

This study meets the requirements for skin sensitization.
