Response, by Guideline

Guideline #: 132-1(a) Description: Foliar Residue Dissipation Is requirement applicable? (Y/N): Y

Has an acceptable summary been submitted? (Y/N): N

Data Waiver() Time Extension() Other () N/A

Data Waiver/Time Extension (If applicable) Granted? (Y/N): N/A

Discussion:

Triadimefon, a fungicide formulated as an emulsifiable concentrate, a granular, a wettable powder and as water dispersible granules, is applied to a variety of crops ranging from nuts, pome fruits and grapes to raspberries, grains, melons and vegetables.\(^1\)
Applications are made using typical ground and aerial techniques (foliar spray, broadcast).\(^1\)
The potential for exposure exists (i.e., foliar applications).
Triadimefon (Bayleton) is a carcinogen.\(^2\)
The registrant indicated in a Phase 3 response that a study will be submitted in support of this guideline. Upon receipt of the study, OREB will evaluate it to determine if it adequately fulfills the guideline requirement.

Guideline #: 132-1(b) Description: Soil Residue Dissipation

Is requirement applicable? (Y/N): N

Has an acceptable summary been submitted? (Y/N): N

Data Waiver() Time Extension() Other () N/A

Data Waiver/Time Extension (If applicable) Granted? (Y/N): N/A

Discussion:

Triadimefon, a fungicide formulated as an emulsifiable concentrate, a granular, a wettable powder and as water dispersible granules, is applied to a variety of crops ranging from nuts, pome fruits and grapes to raspberries, grains, melons and vegetables. Applications are made using typical ground and aerial techniques (foliar spray, broadcast). Minimal potential for worker exposure to soil exists. The toxicity triggers are met (i.e., carcinogen). Based on the available use data, a soil residue dissipation study is not required.

Use information is based on the LUIS report dated 10/24/90 from Phyllis Johnson, BEAD.

The toxicity data is retrieved from the tox one-liner dated 11/2/90, discussion with SACB, and the 12/5/90 memo to HED which list chemicals evaluated for carcinogenic potential.

Guideline #: 133-3 Description: Dermal Exposure

Is requirement applicable? (Y/N): Y

Has an acceptable summary been submitted? (Y/N): N

Data Waiver() Time Extension() Other () N/A

Data Waiver/Time Extension (If applicable) Granted? (Y/N): N/A

Discussion:

Triadimefon, a fungicide formulated as an emulsifiable concentrate, a granular, a wettable powder and as water dispersible granules, is applied to a variety of crops ranging from nuts, pome fruits and grapes to raspberries, grains, melons and vegetables. Applications are made using typical ground and aerial techniques (foliar spray, broadcast). The potential for exposure exists (i.e., foliar applications). Triadimefon is considered a carcinogen.2 registrant indicated in a Phase 3 response that a study will be submitted in support of this quideline. Upon receipt of the study, OREB will evaluate it to determine if it adequately fulfills the quideline requirement.

Guideline #: 133-4 Description: Inhalation Exposure

Is requirement applicable? (Y/N): Y

Has an acceptable summary been submitted? (Y/N): N

Data Waiver() Time Extension() Other () N/A

Data Waiver/Time Extension (If applicable) Granted? (Y/N): N/A

Discussion:

Triadimefon, a fungicide formulated as an emulsifiable concentrate, a granular, a wettable powder and as water dispersible granules, is applied to a variety of crops ranging from nuts, pome fruits and grapes to raspberries, grains, melons and vegetables. Applications are made using typical ground and aerial techniques (foliar spray, broadcast). The potential for worker exposure exists based on the foliar and broadcast applications. The registrant indicated in a Phase 3 response that a study will be submitted in support of this guideline. Upon receipt of the study, OREB will evaluate it to determine if it adequately fulfills the guideline requirement.

Use information is based on the LUIS report dated 10/24/90 from Phyllis Johnson, BEAD.

The toxicity data is retrieved from the tox one-liner dated 11/2/90, discussion with SACB, and the 12/5/90 memo to HED which list chemicals evaluated for carcinogenic potential.

Case No.: 2700 Page 4 of 4

Chemical No(s).: 109901

Other Requirements:

Applicator Exposure Monitoring (Subdivison U)

Guideline #231: Estimation of Dermal Exposure at Outdoor Sites Guideline #232: Estimation of Inhalation Exposure at Outdoor

Sites

Guideline #233: Estimation of Dermal Exposure at Indoor Sites

Guideline #234: Estimation of Inhalation Exposure at Indoor Sites

Comments:

Triadimefon, a fungicide formulated as an emulsifiable concentrate, a granular, a wettable powder and as water dispersible granules, is applied to a variety of crops ranging from nuts, pome fruits and grapes to raspberries, grains, melons and vegetables. Applications are made using typical ground and aerial techniques (foliar spray, broadcast). The potential for mixer/loader/applicator exposure exists based on the ground and aerial applications. Triadimeton is considered a carcinogen. The registrant has submitted 2 protocols to OREB for review which were found to be acceptable (ground boom application on wheat, airblast application on grapes). OREB will evaluate submitted exposure studies, (MRID Nos. 409959-21 -Ground Boom Study on wheat and 413168-01 - Airblast Study on grapes) to determine if they adequately fulfill this data requirement.

Use information is based on the LUIS report dated 10/24/90 from Phyllis Johnson, BEAD.

The toxicity data is retrieved from the tox one-liner dated 11/2/90, discussion with SACB, and the 12/5/90 memo to HED which list chemicals evaluated for carcinogenic potential.
