1.0 INTRODUCTION

Chemical Name and Type of Pesticide: 1-(4-chlorophenoxy-3,3-dimethyl-1-(1H-1,2,4-triazol-1-yl)-2-butanone, 50% ai, fungicide

Trade Name: BAYLETON 50% Wettable Powder

Chemical Structure:

Mobay is seeking the addition to its label of apricots, nectarines, peaches, plums, prunes, cucurbits, and sugar beets. BAYLETON 50% WP is currently registered for a number of uses, including pine seedlings, apples, and almonds.

2.0 DIRECTIONS FOR USE :

See attached label.

3.0 DISCUSSION OF DATA

No new data submitted.

4.0 RECOMMENDATION

4.1 EAB concurs with the proposed use of BAYLETON 50% WP on stone fruits, since the environmental chemistry data we have supports this orchard use.

4.2 Regarding cucurbits and sugar beets, rotational crop restrictions apply to both of these and must be placed on the label:

Cucurbits - January 19, 1983 review supported a 35-day rotational crop restriction for soybeans, beans, and peas, if forage and vines not be used for food or feed. This would also apply to cucurbits

Sugar beets - Data support a 4-month rotational crop restriction on root crops, so long as tops are not used for food or feed.
