SUBJECT: Addendum to Brodifocum Review for Outdoor Use

FROM: Russel T. Farringer, Wildlife Biologist, EEB/HED

TO: Dan Peacock

As per our conversation, and subsequent conversation with Mr. James Wagner (ICI Americas), consideration of storm sewer and sanitary sewers baiting the following suggestions and/or addition to label instructions should be considered:

1. When baiting sewers bait should be placed above normal high flow water line.
2. When baiting near an out flow of sewers that empty into open drainage ditches, or other water ways the plastic bait pack will have to be split.

Russel T. Farringer
