

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY WASHINGTON, D.C. 20460

DEC | 5 1982 **MEMORANDUM**

TO:

Richard Mountfort (23)

Registration Division (TS-767)

OFFICE OF PESTICIDES AND TOXIC SUBSTANCES

THRU:

Orville E. Paynter, Ph.D.

Chief, Toxicology Branch

Hazard Evaluation Division (TS-769)

SUBJECT:

Review of Protocol for One-Year Chronic Dog Study of

Thidiazuron

Tox. Chem. 659A

Reg. No. 2139-122

Recommendation/Discussion:

Nor-Am has recently submitted the protocol for a one-year study of oral toxicity in the beagle dog. Four dose levels with 5 animals/sex/dose level will receive thidiazuron in the diet. Clinical pathology will be conducted at 0, 3, 6, 9 and 12 months.

Ophthalmoscopic examinations will be conducted initially and at 6 and 12 months. Necropsies will be conducted on all animals under the direct supervision of a pathologist. Ten organs will be weighed for scheduled sacrifice animals and a variety of tissues examined microscopically from all dogs on test. All animals will be observed twice a day and body weights and food consumption recorded weekly.

The protocol appears to be acceptable as submitted.

Gary J. Burin, Toxicologist Kehos

Toxicology Branch

Hazard Evaluation Division (TS-769)
