OFFICE OF
PESTICIDES AND TOXIC SUBSTANCES

MEMORANDUM

March 27, 1987

SUBJECT: Avermectin B₁, Dermal Absorption

TO: Edwin Budd, Head
Review Section II
Toxicology Branch

FROM:  7-157
Robert P. Zendzian PhD
Pharmacologist
Mission Support Staff
Toxicology Branch
HED (TS-769)

Based on the data submitted by the Registrant, Merk, one may reasonably conclude that the maximum dermal absorption of Avermectin B₁ is one percent of the applied dose.

A meeting was held in Dr. Farber's office on March 27, 1987 at 9:00 A.M. with representatives of Mecck Sharp & Dohme concerning the dermal absorption of Avermectin B₁. The Registrant presented information on the dermal absorption, physical properties, metabolism and relative acute oral/dermal toxicity of Avermectin B₁ (copy attached). The Registrant concluded that this information justified accepting a value of one percent as the maximum of Avermectin B₁. I agree with this conclusion.
