Shaughnessy No.: 128501

Date Out of EFGWB: 17 1990

To: Robert Taylor

Product Manager 25 Registration Division

From: Henry P. Nelson, Acting Chief H Nelson

Environmental Chemistry Review Section #3

Environmental Fate and Ground Water Branch/EFED

Through: Henry Jacoby, Chief

Environmental Fate and Ground Water Branch/EFED

Attached, please find the EFGWB review of . . .

Reg./File # : 264987, 264988, 162448, 162449

Chemical Name : <u>Sulfosate</u>

Type Product : <u>Herbicide</u>

Product Name : Touchdown Concentrate and Touchdown 4LC

Company Name : ICI

Purpose : Screen for Registration on corn and soybeans

Date Received: ____ EFGWB # (s): 900632-3, 900300-1

Action Code : 510

Deferrals to: ____ Ecological Effects Branch, EFED

Science Integration and Policy Staff,

Non-Dietary Exposure Branch, HED

_____ Dietary Exposure Branch, HED

_____ Toxicology Branch I, HED

_____ Toxicology Branch II, HED

SUBSTANCES

MEMORANDUM

SUBJECT:

SULFOSATE

FROM:

Akiva D. Abramovitch, Ph.D.

Review Section #1

Exposure Assessment Branch/EFED (H7505C)

TO:

Cynthia Giles (H7505C) Registration Division

THRU:

Henry Nelson, Ph.D., Acting Chief

Review Section #3

Environmental Fate and Ground Water Branch/EFED(H7505C)

Henry Jacoby, Chief

Environmental Fate and Ground Water Branch/EFED(H7505C)

Sulfosate passed the EFGWB screen for registration for use on soybeans and corn.

The data requirements already satisfied are as follows:

Hydrolysis on 3/1/84.

Photodegradation in water on 3/1/84.

Photodegradation on soil on 4/27/87.

Aerobic and anaerobic soil metabolism on 6/26/87 and 9/22/87 Leaching and adsorption desorption on 9/22/87. Fish accumulation on 3/1/84.

Unsatisfied data requirements for registration for use on soybeans and corn are as follows:

Confined (and field) accumulation in rotational crops. Field dissipations.

The registrant submitted three field dissipation studies addressing the dissipation and leaching of the two sulfosate moieties. Confined crop rotation studies were also submitted. These studies are presently under review by the contractor and will also be evaluated by EFGWB. EFGWB will then decide whether these studies fully address all ground water and accumulation in rotational crops concerns and whether additional field studies are needed. Field

dissipation studies should address the two formulations used on corn and soybeans and be conducted at the maximum application rate and under conditions sulfosate is most likely to exhibit downward mobility.

The label for use on corn allow rotation only to corn. Therefore, without rotation to other crops registration on corn can be issued without acceptable confined (and field) accumulation data. However, no restriction has been placed on the soybeans label to date. Since accumulation was observed in confined crops which are presently under review, unrestricted rotation from soybeans to other crops should not be allowed (unless tolerances on the rotated crops are imposed) until the crop rotation issue is resolved.

Presently all submitted studies are being reviewed for registration for use on corn and may also satisfy the soybeans registration.

CC: William Evans
