GOLF COURSE, CONCERT  
& OTHER MEETING  
AREAS.

# MOSQUITO BEATER®

© 1972 & manufactured by  
**BONIDE CHEMICAL CO., INC. UTICA, N.Y. 135**

**DIRECTIONS FOR APPLICATION:** Mosquito Beater® is quick and easy to apply. It is ready to use: no mixing, no water. Simply broadcast granules on the ground (p holes in bag and scatter by shaking) or apply with lawn spreader, dust gun or hand crank duster.

One application can be 100% effective from a time shortly after application up to two days, and significantly effective (virtually no mosquitoes) up to eight days application, depending on rainfall and wind currents which cause reinfestation.

As the action of Mosquito Beater® depends upon release of active ingredients in the vapor phase, air movements effects results considerably. Best results in small areas are obtained in quiet or relatively still air, such as occurs during early evening periods. Application should be made about an hour before the area is to be occupied. During periods of light to medium air currents allow a longer period prior to occupancy or treat an area large enough to overcome localized effect of breezes. (See diagram suggested application techniques.) As a rule, the air is sufficiently still when Mosquito Beater® fragrance can be detected while standing in the treated area to be occupied.

Apply at the rate of one half cup per 10 foot by 10 foot area. Do not overdose desirable lawn areas. In case of overdose disperse granules with spray from garden hose. Always treat an area considerably larger than that to be occupied, usually not less than 100 feet by 50 feet or 70 feet by 70 feet and preferably double this area for best overall results. Apply liberally to moist dark areas of heavy growth. Will not harm flowers, shrubs, lawns, soil or the applying person. Repeat application when area becomes reinfested. (i.e. when mosquitoes become annoying.)

Do not reuse empty container. Destroy it by burying with waste or burning. Stay away from smoke or fumes.
