

Saves your back- Top Kills unwanted
vegetation without digging or pulling.

Clean, easy to use, dry granules.
Can be applied directly from bag, see directions.

GRASS-N-WEED KILLER[®]

FOR USE ON GRAVEL PATHS,
DRIVEWAYS, PATIOS, DITCH
BANKS, FLOWER, SHRUB
AND TREE BORDERS,
ALSO FOR LAWN
RENOVATION PRIOR
TO RESEEDING.
NO HARM
TO SOIL

Spot treats up to 1,000 sq. ft. or more depending on density of
undesirable growth.

Also Kills poison ivy and poison oak (May need repeat applications).

ACTIVE INGREDIENT:

*Dimethylarsinic Acid (Cacodylic Acid) 6.0%

INERT INGREDIENT: 94.0%

100.0%

*Total arsenic, as elemental, all water soluble-3.26%

CAUTION: KEEP OUT OF REACH OF CHILDREN. See other cautions on back.

GRASS-N-WEED KILLER

GRASS-N-WEED KILLER may be applied any time undesirable vegetation is growing actively. During cool, cold or drought periods action is slow and retreatment may be necessary. It is a non-selective contact plant killer.

DIRECTIONS FOR SPOT TREATMENT

1. Choose a calm period, no strong, gusty winds (usually early morning) to avoid drift of material to valuable plantings. Soil should be moist and the day warm and sunny for best results.
2. Apply directly on undesirable vegetation after watering, rainfall or when moist with dew. Delay application if rain is expected.
3. Sift material from bag covering all leaf surfaces of plant to be killed with a thin coat of granules. Moisture on plant will make granules stick.
4. Do not water after application. Unexpected rain within 24-36 hours after application will reduce or prevent results. Similarly if accidentally applied to desirable plant, washing granules off will prevent or materially reduce damage. Action is result of absorption by vegetation of granule ingredients. Therefore if granules are disturbed off leaf surfaces, results are prevented and repeat treatment is necessary. Will not injure plants, shrubs or trees through their roots.
5. Avoid tracking material from treated areas to desirable lawn or grass areas. Keep children and pets off treated areas until material has been washed off foliage by sprinkling or rain.
6. Effectiveness is indicated by browning and loss of color within 3 days after which foliage may be washed off as vegetation has absorbed necessary ingredient.

CAUTION: Harmful if swallowed. Avoid contact with skin, eyes, and clothing. In case of contact and after use wash or flush with water. Avoid contamination of feed, foodstuffs, fish ponds, water supplies and streams. Store out of reach of children. Not for use in vegetable gardens.

DIRECTIONS FOR SPREADER APPLICATION—LAWN RENOVATION

Mow lawn short as possible, remove clippings. If heavy thatch is present remove by raking or machine scarify. Apply contents of this bag to 200 square feet of measured lawn area. Follow directions 1,2,4&5 above. Spreader settings for 1/4 inch wide openings will work on most spreaders, but due to wear and different walking rates adjustments to avoid over or under dose is necessary. Close spreader before filling, don't push filled spreader over desirable areas, and wash out spreader after use. Seed should contact soil for good germination, and may be planted 5 days after last application of Grass-N-Weed Killer.

Starting Point suggested spreader settings for Lawn Renovation:
