WEED KILLER

W/BANVEL® D & 2,4-D

Vapors from this product may injure susceptible plants in the immediate vicinity. Do not use on flowers, vegetables or ornamental beds. On Bermuda, St. Augustine, bent, Dichondra and carpet grass lawns spot treat only as injury may occur. Avoid application on or near desirable trees and other plants, or on areas over their root systems or their movement and washing may cause contact with roots.

This product can reach groundwater from improper handling. To minimize groundwater contamination from spills during loading and cleaning of equipment, take the following steps:

Handling: When handling this product, wear chemical resistant gloves. Wash nondisposable gloves thoroughly with soap and water before removing. If spills occur, collect the material and dispose of by following disposal instructions on this label.

When using this product, wear long-sleeved shirt, long pants, socks, and shoes.

After using this product, remove clothing and launder separately before reuse, and promptly and thoroughly wash hands and exposed skin with soap and water.

Cleaning of Equipment: When cleaning equipment, do not pour the washwater on the ground: spray or drain over a large area away from wells and other water sources.

DIRECTIONS

1. Mow lawn 2-4 days prior to application and delay mowing for three days after application.
2. Choose a calm period (to avoid wind drift of material to valuable plantings) when rain is not expected for 24 hours. Early morning when lawn is moist with dew or after a light shower or hose watering is the best time to apply.
3. Measure area to be treated and apply contents of this bag to area listed on front of bag. Weeds may be spot treated by lightly sifting direct from bag. Spreader settings for 1/4 inch wide openings will work on most spreaders due to wear and different walking rates, adjust your spreader to avoid gross under or over dose. Other suggested spreader settings on list below. Avoid overlapping and double coverage in backing up or turning, close spreader at those times and before filling spreader. Push shut-off open when re-starting. Keep machine handle low or container of machine vertical to ground level. In case of accidental heavy overdose, watering the overdosed area will reduce or prevent damage.
4. Do not water the lawn after application. Twisting and loss of color of weeds within 7 days indicates effectiveness.
5. It is not essential that dead or dying weeds be raked out. Bare spots may be reseeded three weeks after application. 2 to 3 days prior to reseeding, heavily water the lawn.

LAWN WEED KILLER

Lawn Weed Killer can be applied any time spring, summer or fall for general weed control. Application during warm periods 60-85° when weeds are actively growing gives best results. During cool or cold periods action is slow and retreatment may be necessary. Do not apply to a new lawn until after second regular mowing.

The maximum number of broadcast applications per treatment site is 2 per year. Additional spot treatments may be made as needed.

Starting Point suggested spreader settings:

Make & Model	Setting	Make & Model	Setting
Scott.....	8	Montgomery Ward 89-1081	8¾
Jackson 18-26 18"	7	Salem Micro Set 22"	7
