JUN 17 1972

NOTE: Changes in labeling or formula differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Pesticides Regulation Division prior to use of the label in interstate commerce. In any correspondence on this product always refer to the above registration number.

On the basis of the information furnished by the registrant, the above named economic poison is hereby registered under Section 4 of the Federal Insecticide, Fungicide, and Rodenticide Act.

A copy of the labeling accepted in connection with this registration is returned herewith.

Registration is in no way to be construed as an endorsement or approval of this product by this Department. In order to protect the public, the Secretary, on his own motion, may at any time cancel the registration of an economic poison in accordance with Section 4 (c) of the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by a trademark held by others.

The following paragraphs are applicable only when checked:

- To expedite registration, this notice is being issued on the basis of the draft submitted with the application. Certain defects, given below, have been noted. These corrections must be incorporated when the printed labeling is prepared. Five copies of the printed labeling must be submitted to complete the file on this product.
- The registration for this product is being issued with the understanding that certain defects in the labeling which are noted below will be corrected as soon as possible. Objection is not raised to the use of the present labeling for a reasonable period of time while fully corrected labeling is being prepared. Five copies of the corrected labeling must be submitted.

BONIDE MOSQUITO LARVICIDE can be used all season long; does not depend on life cycle timing for effectiveness. It kills by suffocation and mosquitoes do not develop resistance. The last application of the season is as effective as the first. Does not smear or deface the environment with dark oily films or residues.

DIRECTIONS

BONIDE MOSQUITO LARVICIDE is designed for surface application to intermittently flooded areas, temporary rain pools, sloughs and log ponds. Mixture with water (milky appearance) should be avoided or minimized. Avoid solid stream, high pressure or high velocity applications. Adjust spray nozzle for partial cone pattern. Equipment used to apply other materials should be cleaned by rinsing with diesel fuel or fuel oil, then with larvicide.

GROUND APPLICATION: One to five gallons per acre depending on water surface conditions and vegetative density. Use one to 2½ gallons per acre if trees are in green tip stage and vegetative cover is light and water is essentially clean. To penetrate heavier or denser vegetative cover, or if water is substantially polluted, use 2½ to 5 gallons per acre. An average rate of 2½ to 3 gallons per acre (approximately 1 quart to 5,000 sq. ft. — 50' x 100') of water surface covers most conditions.
