

BONIDE ANT is a bendiocarb insecticide for household pest control. It is effective against a wide range of household pests including cockroaches, ants, crickets, silverfish, fleas, ticks, wasps, and spiders. It is also effective against ground beetles, earwigs, millipedes, centipedes, and scorpions. The active ingredient is bendiocarb, which acts as a contact and stomach poison. It is available in a dust formulation for easy application in cracks, crevices, and other pest harborage areas. The product is registered with the EPA and is labeled for use in homes, apartments, and other residential buildings. It is also suitable for use in commercial establishments such as hotels, restaurants, and schools. The product is safe for use around children and pets when used as directed. It is important to read the label carefully and follow the instructions for use to ensure effective pest control and safety.

Cockroaches, Ants, Crickets, Silverfish and Fleas: Thoroughly dust cracks, crevices, and other pest harborage areas. Pay special attention to areas around sinks, refrigerators, and cabinets. For fleas, dust the bedding and wash the pet's bedding with hot water after treatment. **DO NOT TREAT ANIMALS OR THEIR BEDDING WITH THIS DUST.**

Spiders: Dust along and behind baseboards, window sills, and other places where spiders enter premises. When possible, clean up webs and surround the web.

Wasps: This insecticide wasp nest at night with a streamer or dust applicator. Apply to the entrance of the nest. Take precautions to avoid stings. For best results, apply to the nest at night. The dust will enter the nest and kill the wasps. Do not use this product on open wasp nests.

Scorpions, Earwigs, Millipedes, Centipedes and Scorpions: Apply dust to cracks, crevices, and other pest harborage areas. Pay special attention to areas around baseboards, window sills, and other places where these pests enter premises. When possible, clean up webs and surround the web.

Ground Beetles, Earwigs, Millipedes, Centipedes and Scorpions: Apply dust to cracks, crevices, and other pest harborage areas. Pay special attention to areas around baseboards, window sills, and other places where these pests enter premises. When possible, clean up webs and surround the web.
