SHADE TREES & ORNAMENTALS

Mix 1½-2 Tbs. per gallon of water (4-6 oz. per 6 gals.) and apply with a conventional garden sprayer when small larvae begin feeding. Thoroughly cover all plant surfaces. Repeat at 7-14 day intervals as needed to maintain effective control. Do not spray Chinese elms, Japanese maples, red maples or redbuds, as foliage may be damaged.

Use on: Andromedas, Arborvitae, Azalea, Birch, Boxwood, Camellia, Elm, Euonymus, Holly, Juniper, Magnolia, Maple, Oak, Pine, Rhododendorn, Sycamore.

Kills: Cankerworm, Eastern tent caterpillar, Elm leaf beetle, Fall webworm, Forest tent caterpillar, Gypsy moth, Japanese beetle, Lace bug (oaks & sycamore), May beetle, Tussock moth.

Control of Elm Bark Beetle (Vectors of Dutch Elm Disease) – Apply first application before elm flowers or leaves sprout using a 1½ cup (10% fl. oz.) in 1 gallon of water (a 2% spray solution). This application will usually be applied in March in the southern states and in April in the northern states. Use 2 to 3 gallons of spray solution, wetting all surfaces thoroughly. A second application should be made 2½ to 3 months after the first treatment using 3 cup (5% fl. oz.) in 1 gallon of water (1% spray solution). Cover all leaf and bark surfaces.

Control of Elm Leafhopper (Vectors of Elm Phloem Necrosis) - Apply first application when elm leaves are fully grown, using $\frac{2}{5}$ cup (5¹/₅ fl. oz.) in 1 gallon of water (1% spray solution). This application will be made in May in the southern states and in June in the northern states. Thoroughly cover all leaf surfaces. When second flush of growth appears, usually 1 to 2 months after first treatment, repeat the above application covering all leaf surfaces thoroughly.

In those states where both the elm leafhopper and elm leaf beetle are known to be present, a three spray schedule using 36 cup (516 fl. oz.) in 1 gallon of water (1% spray solution) will provide effective control. Apply protective spray before elm flowers or leaves sprout, follow with second protective spray 21/2 to 3 months after the first. Then apply the third protective spray about 1 to 3 months after the second protective spray. Be sure to thoroughly cover all bark and foliar surfaces with each protective spray.

MOSQUITO CONTROL

DRAGON[®] Methoxychlor Insect Spray is effective for controlling mosquitoes around home grounds, patios and picnic areas.

Adult Mosquitoes-Thermal fogging is effective if applied during the active periods of the adults (morning and evening). Avoid fogging when winds exceed 5 miles per hour as its effectiveness is reduced. For fogging small areas, mix 6¹/₄ Tbs. in 1 gal. of light fuel oil to cover 8,700 sq. ft. (an area 87'x100').

Adult Mosquitoes-Mist blowers or conventional sprayer equipment require mixing DRAGON[®] Methoxychlor Insect Spray with water. For spraying small areas, mix 9% Tbs. in 1 gal. of water to cover 8,900 sq. ft. (an area 89'x100').
