

DIRECTIONS FOR USE

RATS: Place 4 to 6 ounces of bait in dry container next to burrows, in runways, or where rats are accustomed to feed. Assure an uninterrupted supply of bait for a period of not less than 12 days and continue baiting until all signs of feeding have stopped. Replace stale, damp or moldy baits with fresh bait.

MICE: Place tablespoonful amounts of bait in shallow containers where mice or signs of mice have been seen. Bait stations at intervals of 8 to 12 feet are recommended. Assure an uninterrupted supply of bait for a period of not less than 12 days.

CAUTION

Protect children, pets and domestic animals from bait. If swallowed by humans, domestic animals, or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of diphydroycoumarin.

This rodenticide contains warfarin, an anti-coagulant chemical that reduces the clotting ability of the blood and, upon repeated feeding, causes fatal hemorrhage in rats and mice. It also contains Anti-K*, an antibacterial agent which inhibits bacteria that produce vitamin K, an antidote for warfarin. It thereby increases effectiveness against hard-to-kill rats and mice and gives better and more thorough control.

NOTE FOR PHYSICIANS: When a human has been known to have ingested this product, blood transfusions combined with intravenous injections and oral doses of vitamin K are indicated as in the case of hemorrhage caused by overdoses of Dicumarol.

NON-WARRANTY: Seller makes no warranty expressed or implied regarding this product except the composition as set forth in the ingredient statement herein. Buyer and user assumes all risk of possession, handling or use whether or not in accordance with any directions contained herein.
