mouse BAIT

NEW! Bait Station Package

CAUTION: Keep Out of Reach of Children
See Side Panel for Additional Cautions

DIRECTIONS FOR USE

Place package where mice or signs of mice have been seen. Punch out the two bait holes in the base of the package. Bait stations at intervals of 8 to 12 feet are recommended. Assure an uninterrupted supply of bait for a period of not less than 12 days.

CAUTION

Baits should be placed in areas inaccessible to children, pets, wildlife and domestic animals or in tamper proof bait boxes. If swallowed by humans, wildlife, domestic animals, or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin.

NOTE FOR PHYSICIANS: When a human has been known to have ingested this product, blood transfusions combined with intravenous injections and oral doses of Vitamin K are indicated as in the case of hemorrhage caused by overdoses of Dicumarol.

This rodenticide contains warfarin, an anticoagulant chemical that reduces the clotting ability of the blood and, upon repeated feeding, causes fatal hemorrhage in rats and mice. It also contains Anti-K*, an antibacterial agent which inhibits bacteria that produce vitamin K, an antidote for warfarin.

Warfarin is a acetylbenzyl-4-hydroxycoumarin
N-(2-Quinoxaliny) sulfanilamide sulfazoquinaxaline

Warfarin is a registered trademark of the Wisconsin Alumni Research Foundation for a rodenticide which is manufactured under license from the Foundation.
