Do not apply this product by use of a mechanical burrow builder machine or any other type of mechanical application equipment, including mechanized probes. Do not broadcast bait.

BAITING:

Place baits in main runways. To locate main runways probe 12 inches to 18 inches from the surface mound on the side which is flattened or depressed using a burrow probe or a smooth metal rod. When resistance on probe suddenly decreases, probe is in the main runway. Open the runway with the probe, a spade or a shovel. Place one BAIT BLOCK into each opening of the runway and cover the opening securely to exclude light. Do not permit the loose soil to cover bait.

Place baits at two or three locations in each main burrow (runway) system. A pocket gopher will normally travel to all portions of its burrow system within a few days. As some gophers may die above ground, check the area periodically for 10 to 15 days after treatment. Bury or incinerate (if permitted locally) any dead animals found. If pocket gopher activity persists 2 weeks after treatment bait the active burrow a second time.
