ONeX

HYDROPONIC COMPANY

GENERAL

Rat and mouse bait containing RAPONeX repeat dily without developing bait shyness. They return to the bait until enough RAPONeX accumulates to cause death. No death occurs within 10 to 15 days after feeding. Contents of bait-packet will kill mice if used up before developing bait shyness within 24 hours. Bait-packets containing RAPONeX should be replaced promptly.

DIRECTIONS

Use one bait-packet per mouse hole, trap or bait station. For each mouse hole, trap or bait station, use one bait-packet per week. For rat baiting, use one bait-packet per hole, trap or bait station. Destroy empty bait-packets and replace them with fresh ones as needed. Use only bait-packets for mice. If bait-packets are not used to poison bait stations, they will be rendered ineffective per station; use one bait-packet per station.

TO OPEN CUT ALONG DOTTED LINES

FOLD EACH FLAP BACK TO EDGE OF BAIT-PACKET

CAUTION

RAPONeX contains an active ingredient an anti-coagulant chemical, therefore, baits prepared with RAPONeX should be protected or so placed that human, livestock, poultry or pets will not eat them. If eaten, treatment should be given immediately.

ANTIDOTE: VITAMIN K When a human has been known to have ingested any RAPONeX, blood should be given with intravenous injections, and oral doses of Vitamin K are indicated as in the directions for the antidote, overdoses of Dicumarol.

Whenever RAPONeX Bait or Bait is set in places easily accessible to humans, livestock, poultry, or pets, the bait should be placed in areas inaccessible to children, pets, wildlife and domestic animals. Bait should be placed in boxes.
