Reg # 100-460

PM-13

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contail with anything that has been treated, such as plants, soil, or water is:

Coverails

)

- Waterproof gioves
- . Shoes plus socks

## **NON-AGRICULTURAL USE REQUIREMENTS**

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not enter or allow entry into treated areas until sprays have dried. Do not permit children or pets to go onto sprayed grass until spray has completely dried.

. . ,

2 7 2!

Note: The California Department of Agriculture has set a 5-day reentry period for diazinon on grapes, peaches, and nectarines. Five days should elapse between the time of application and the time a worker may enter the field to engage in any activity requiring substantial contact with treated foliage. When a mixture of two or more organophosphate pesticides are applied in combination, the interval should be prolonged by adding to the largest applicable interval an additional 50% of that interval.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR INSECT CONTROL, CROPINJURY, OR ILLEGAL RESIDUES.

#### **General Information**

D-z-n<sup>2</sup> diazinon 50W is a wettable powder which should be mixed with sufficient water to assure thorough coverage unless otherwise noted in the Directions for Use.

Best control is obtained when application is made at first sign of pests. Application should be repeated only as directed to maintain control.

Since D-z-n diazinon 50W is a wettable powder formulation, constant agitation is necessary during application.

To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, since crop or plant injury may result.

Do not use on food crops grown in greenhouses.

#### Work Safety Rules

REPEATED EXPOSURES TO CHOLINESTERASE INHIBITORS SUCH AS ARE CONTAINED IN THIS PRODUCT MAY, WITHOUT WARNING, CAUSE PROLONGED SUSCEPTIBILITY TO VERY SMALL DOSES OF ANY CHOLINESTERASE INHIBITOR.

When handling D-z-n diazinon 50W, do not rub eyes or mouth with hands. If you feel sick in any way, STOP work and get help right away. See Practical Treatment section of this label,

#### CHEMIGATION

## APPLICATION THROUGH AN IRRIGATION SYSTEM (CHEMIGATION) - CRANBERRIES ONLY

D-z-n diazinon 50W may be applied alone or in combination with other pesticides registered for application through sprinkler irrigation systems to cranberries. To insure compatibility, pour the products into a small container of water in the correct proportions. After thorough mixing, let stand for five minutes. If the combination remains mixed, or can be remixed readily, the mixture is compatible.

Do not apply this product through any type of irrigation system to other crops. For chemigation, apply this product to cranberries only through sprinkler irrigation systems. Do not apply this product to cranberries through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of tr-lated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect the irrigation system used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments, if the need arises.

#### Chemigation System Connected to Public Water Systems

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

## Sprinkler Chemigation

·)

- The system must contain a functional check-valve, a vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
- The pesticide injection pipeline must contain a 'unctional, automatic, quick-closing check-valve to prevent the flow of fluid back toward the injection pump.
- 3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., disphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
- 7. Do not apply when wind speed favors drift beyond the area intended for treatment.

## **Operating Instructions**

- Determine the acreage to be treated by the sprinkler system.
- 2 Measure the appropriate amount of D-z-n diazinon 50W needed to treat the acreage to be treated. Refer to the specific directions for use for cranberries for the application rate and the amount of water per acre.
- Add the pre-measured D-z+n diazinon 50W to the chamigation system supply tank and dilute with water if needed. Constant, agitation is required to keep the product in solution when D+z+n diazinon 50W is used alone or tank mixed with other pesticides+ registered for sprinkler chemigation application to cranberries.
- 4 Start the irrigation system and bring the system up to full pressure, making certain that all sprinkler heads are functioning properly.

BEST AVAILABLE GUPT

Engage the chemigation injection or venturi system to add the diazinon to the irrigation lines.

6 Continue to run irrigation system for a few minutes after supply tank is empty to allow material in the irrigation lines to reach the sprinkler heads furthest from the chemigation injection point.

## Fruit and Nut Crops

## REI-24 hours.

)

)

D-z-n diazinon 50W may be applied using ground or aerial anplication equipment as specified in the table below. This table also indicates the minimum amount of water that can be used for the various methods of application. The rate of D-z+n diazinon 50W for aerial spray or concentrated spray applied by ground equipment is based on a dilute full cover spray applied to fruit or nut trees with conventional ground equipment at a rate of 300-400 gallons of water per acre. The specific amount of product to be used appears under the separate directions for use for each crop. (Note: "Ibs." or "Ibs. of product" in the directions means pounds of this product, not pounds of active ingredient). If the "Rate" calls for 1 lb. of D-z+n diazinon 50W per 100 gallons of water, this amounts to 3-4 lbs. of product per acre when applied to fruit trees at usual dilute ground spray volumes of 300-400 gallons of water per acre. In no case should the amount of product used per acre exceed the maximum amount per acre per application that is specified in the directions for use for individual crops.

\*PHI = Pre-Harvest Interval or the number of days between the last application and harvest.

Notes: (1) Soil incorporation: Following application of this product to control vegetable soil insects, immediately incorporate the product into the soil to the recommended depth (see Timing/Special Directiona) using a rotary hoe, cultivator, disk, harrow, or other suitable means. For control of surface cutworms, incorporate 2-3 inches, for subterranean cutworms incorporate 3-6 inches. (2) To Protect Bees: Foliar applications of this product should not be made to peas or beans if these crops or weeds in the treatment area are in bloom, or to corn during the pollen shed period.

Стор	Pest	Rate	Tir g/Special Directions
Beans (Lima, Pole, and Shap) (succulent only)	Cutworms	4-8 lbs per acre or 1½-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the soil. (See Soil Incorporation Note.)
	Wireworms	6-8 lbs. per acre or 2¼-3 oz per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
	Black Bean Aphids, Mexican Bean Beetles, Dipterous Lealminers	1-11/2 tbs. per acre or 2/s.3/s oz. per 1,000 sq. ft.	Apply as insects occur. Repeat application, as necessary, every 5 days. Do not make more than 3 applications per season. Do not apply within 7 days of harvest or illegal residues may occur. Bean forage or bean hay may be fed to dairy and beef
	Cucumber Beetles	1/2-3/4 lb. per acre	cattle and sheep. Wait 4 days following treatment if forage is to be cut for hay.
		or 1/s-3/10 oz. per 1,000 sq. ft.	Make cucumber beetle application in 100 gals, of water per acre.
			Note: Diazinon will not control organophosphate- résistant leafminers.
	Lealhoppers, Spider Mites	1 lb. per acre or 2/s oz. per 1,000 sq. lt.	Apply as pests occur. Repeat application as necessary every 5 days. Do not make more than 3 applications per season. Do not apply within 7 days of harvest or illegal residues may occur.
			Bean forage or bean hay may be fed to dairy and beef cattle and sheep. Wait 4 days following treatment if forage is to be cut for hay.
			Note: Diazinon will not control organophosphate- resistant leafminers.
Beets, Red (Table)	Cutworms	4-8 lbs. per acre or 1 ½-3 oz. per 1,000 sq. tt.	Broadcast just before planting and immediately incor- porate into the soil. (See Soil Incorporation Note.)
	Mole Crickets	2 lbs. per acre or ¾ oz. per 1,000 sq. ft.	Apply to plant beds or fields 1-2 days before planting, and immediately incorporate into the top 1-2 incress of soil.
	Wireworms	6-8 lbs. per acre or 21⁄4-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
	Aphids, Dipterous Leafminers	<sup>1</sup> /2-1 1b. per acre or 1/s.2/s oz. per 1,000, sq. ft.	Apply as insects occur. Repeat application as necessary up to 5 times with a minimum of 7 days between applica- tions. Do not apply within 14 days of harvest, or illegal residues may occur.
			Note: Diazinon will not control organophosphate- resistant leatminers.
Broccoli	Root Maggots	4-6 lbs. per acre or 1½-2¼ oz. per 1,000 sq. ft.	Broadcast just before planting or transplanting and immediately incorporate into the top 3-4 inches of soil.
		4-8 oz. in 50 gals of water	In transplant water as a grench application when 200-300 gals, of water are used per acre. Apply ½-1 cup (4 to 8 oz.) per plant by hand or by tractor mounted sprayer equipped with drop nozzles to direct spray to the base of the plant.
			Note: Transplant water treatments may result in stand reduction due to plant stress at time of transplanting
	Cutworms	4-8 lbs. per acre or 1½-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the soil (See Soil Incorporation Note.)
	Mole Crickets	2 lbs. per acre or % oz. per 1,000 sq. ft	Apply to plant beds or fields 1-2 days before planting an immediately incorporate into the top 1-2 inches of soil
	Wireworms	6-8 lbs per acre or 21/4-3 oz per 1,000 sg ft	Broadcast just before planling and immediately incor- porate into the top 4-8 inches of soil

Squash, Summer (continued)	Aphids, Leatminers, Thrips, Striped Cucumber Beetles, Melonworms, Leathoppers, Spider Mites	V2-1 V2 lbs. per acre or V5-3/5 oz. per 1,000 sq. ft.	Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 7 days of hervest or illegal residues may occur. No 'e: Diazinon will not control organophosphate- resistant leafminers.
Squash, Winter	Cutworms	4-8 lbs. per acre or 1½-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the soil, (See Soil Incorporation Note.)
	Wireworms	6-8 lbs. per acre or 2¼-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
	Aphids, Lealminers, Thrips, Striped Cucumber Beetles, Melonworms, Leathoppers, Spider Mites	1/2-11/2 lbs. per acre or 1/5-3/5 oz. per	Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 3 days of harvest, or illegal residues may occur.
		1,000 sq, ft.	Note: Diazinon will not control organophosphate- resistant leafminera.
Sweet Corn	Cutworms	4-8 lbs. per acre or 1 ½-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the soil. (See Soil Incorporation Note.)
	Seed Corn Maggots	4-8 lbs. per acre or 11/2-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 2 inches of soil.
	Wireworms	6-8 lbs. per acre or 21/4-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
	Corn Earworms	2-21/2 ibs. per acre or 3/4-1 oz. per 1,000 sq. ft.	Apply when silks first appear. Repeat application every 7 days up to a maximum of 5 applications, if necessary.
	Corn Leaf Aphids	1-2 lbs. per acre or 2/5-3/4 oz. per 1,000 sq. ft.	Apply in sufficient water to provide complete coverage to the upper portions of the plants. Repeat in 7 days if necessary. Do not make more than 5 applications per season.
	Grasshoppers, Spider Mites, Fleabeetles	1 lb. per acre or 2/s oz. per 1,000 sq. ft.	Apply as insects occur. Repeat if necessary, but do not make more than 5 applications per season.
	Sap Beetles	2-21/2 lbs. per acre or 3/4-1 oz. per 1,000 sq. ft.	Consult local agricultural authorities for proper timing of application. Repeat application in 7 days. If necessary. Do not make more than 5 applications per season.

Notes: (1) To protect bees, do not apply foliarly to corn during the pollen shed period. (2) Allow a minimum of 7 days between the last application and grazing or cutting for forage. (3) Corn may be picked 7 days after the last application.

Sweet Potatoes	Wireworms, Flea Beetles	6-8 lbs. per acre or 21/4-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
Swiss Chard	Cutworms	4-8 lbs. per acre or 1½-3 oz. per 1,000 sq. ft	Broadcast just before planting and immediately incor- porate into the soil. (See Soil Licorporation Note )
	Wireworms	6-8 lbs. per acre or 2¼-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
	Aphids, Corn Earworms, Imported Cabbageworms, Diamondback Mott.s, Harleguin Cabbagebugs	V2-1 lb. per acre or 1/s-2/s oz. per 1,000 sq. ft.	Apply as insects occur. Repeat application, as necessary, up to 5 times, with a minimum of 7 days between applications
	,		Do not apply within 14 days of harvest or illegal residue: may occur

21

12

Сгор	Pest	Rate	Timing/Special Directions
Tomaioes	Cutworms	4-8 lbs. per acre or 1 ½-3 oz per 1 000 sq. ft	Broadcast just before planting and immediately incor- por the into the soil. (She Soil Incorporation Note )
	Mole Crickets	2 lbs. per acre or ¾ oz per 1,000 sq ft.	Apply to plant beds 1-1 days before planting and immediately incorporate into the top 1-2 inches of soil.
	Wireworms	6-8 lbs. per acre or 2¼-3 oz, per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
	Aphids, Dipterous Leatminers	<sup>1</sup> /2 lb. per acre or <sup>1</sup> /s oz. per 1,000 sq. ft.	Apply as insects appear. Repeat application after 7 days, if necessary. Do not make n ore than 5 applications per season. Do not apply within one day of harvest or illegal residues.
	Banded Cucumber Beetles, Fall Armyworms, Southern Armyworms, Beet Armyworms	34-1 lb, per acre or 3/10-2/5 02, per 1,000 sq. ft.	may occur. Note: Diazinon will not control organophosphate- resistant leafminers.
	Vinegar Flies (Drosophila spp.)	V2+1 V2 Ibs. per acre or 1/s-3/s oz. per 1,000 sq. ft.	
Turnips (Roots and Tops)	Cutworms	4-8 lbs. per acre or 1½-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the soil. (See Soil Incorporation Note.)
	Mole Crickets	2 lbs. per acre or ¾ oz. per 1,000 sq. ft.	Apply to plant beds or fields 1-2 days before planting and immediately incorporate into the top 1-2 inches of soil.
	Wireworms	6-8 lbs. per acre or 2¼-3 oz. per 1,000 sq. ft.	Broadcast just before planting and immediately incor- porate into the top 4-8 inches of soil.
	Aphids, Flea Beetles, Dipterous Leafminers	<sup>1</sup> /2-1 lb. per acre or <sup>1</sup> /s-2/s oz. per 1,000 sq. ft.	Apply as insects occur. Repeat application, as necessary, up to 5 times, with a minimum of 7 days between applications. Do not apply within 14 days of harvest or illegal residues
			may occur. Note: Diazinon will not control organophosphate- resistant leafminers.

## Mushroom Houses

## **Mushroom files (Phorids and Sciarids)**

Mix 4-5 lbs. of D-z+n diazinon 50W in 50 gallons of water and spray on outside and inside walls, floors and sideboards of mushroom houses after compost has been pasteurized by heating. Also spray over the plastic covering the beds and trays after spawning. Note: Do not apray the compost. To avoid illegel residues, do not apply more than 3 applications to mushroom houses per crop.

## Seed Treatment - Planter Box Treatment

In the planter box, mix with seed as a dry mixture. Stir slightly using a mixing stick, DO NOT MIX WITH BARE HANDS. Treat only those seeds needed for immediate use, minimizing the interval between treatment and planting. Do not stors excess treated seed beyond planting time. Exposed treated seeds may be hazardous to birds and other wildlife. Dispose of uncess treated seed by burial away from bodies of water.

Notes: (1) If seed has not been treated with a fungicide, use an EPA-registered fungicide combination with D-z-n diazinon 50W at rates indicated on the fungicide package. Failure to use a fungicide thay result in injury to the seed. (2) If the seed treatment increases the friction between seeds sufficiently to reduce the rate of delivery through the planter, ½ oz. of graphite per bushel seed should be added as a drill lubricant. Adjust the planter to give the required rate of seed delivery with the treated seed. (3) Treated seed must not be used for or mixed with food or animal feed or processed for oil.

Corn

Seedcorn Beetle: Mix 3 oz. per bushel of seed.

Corn, Succulent Peas, and Succulent Beans

Seedcorn Maggot: Mix 1/2 oz. per bushel of seed.

## Field Crope

### REI-24 hours

Apply soil and foliar applications of D+z+n diazinon 50W in sufficient water to ensure thorough coverage for foliar applications. Observe stated time intervals between last application and harvest, as well as intervals between applications and total number of applications that can be made per season:

7 21

## Pre-Harvest Intervals (PHI\*) For Foliar Applications

Сгор	Рні*
Hops	. 14
Sugar Beets	14

\* PHI = Pre-Harvest interval or the number of days between the last application and harvest.

Сгор	Pest	Rate	Timing/Special Directions
Hops	Aphids, Spider Miles	2 lbs per acre	Apoly as pests occur. Repeat applications, if necessary in 14 days. Do not make more than 4 applications per season or apply within 14 days of harvest or illegal refidues may occur.
Sugar Beets	Wireworms	6-8 lbs. per acre	Broadcast just befive planting and immediately incorporate into the top 4-6 inches of soil.
			Do not apply more than 8 lbs. of this product to the soil, per season.
	Beet Leafhoppers, Dipterous Leafminers, Aphids	34-1 lb. per acre	Apply as insects occur. Repeat application, as necessary, up to 5 times per season with a minimum of 7 days between applications.
			Do not apply within 14 days of harvest.
			Note: Diazinon will not control organophosphate- resistant leafminers.
	Grasshoppers	1 lb, per acre	Apply as insects occur. Repeat application, as necessary, up to 5 times per season with a minimum of 7 days between applications.
		1	Do not apply within 14 days of harvest.

Note: Tops may be led to beef and dairy animals.

### Grassland Insects

)

#### Ditch Banks, Roadsides, Wasteland, Noncrop Areas, Barrier Strips

Grasshoppers: Apply 34-1 lb, per acre in sufficient water or oil to obtain thorough coverage when insects first appear, preferably in the nymphal stage.

Do not graze or use treated grass for food or feed

## Livestock Insects

## Sheep "Ticks" (Keds), Lice

High gallonage, high pressure spray. Mix ½ Ib. in 100 gals, of water, and apply at the rate of 1 gal. per animal

Low gallonage, low pressure spray: Mix 1 lb, in 100 gals, of water. Apply at the rate of 1 qt, per animal.

Sprinkler Can: Mix 1 oz. in 6 gals, of water. Crowd sheep into a small pen and sprinkle 1 qt. of this mixture over the head, neck, top, and side of each sheep. Stir or agitate mixture frequently.

Note: Do not slaughter sheep within 14 days after treatment. Repeat applications as necessary.

#### Fly Control in Livestock Structures

Fly control in barns and animal sleeping quarters (except dairy barns, milk rooms, and poultry houses).

Residual Spraya: Remove animals from buildings or corrals prior to treatment and keep animals out for at least 4 hours. Mix 2 lbs of D+z+n diazinon S0W in 25 gats, of water and apply as an overall spray to ceilings and walls of treatock sheds, call barns, hog barns, loaling sheds, and other farm buildings except poultry houses, dairy barns, and milk rooms. Areas where flies congregate, such as garbage dumps and coirals, should be sprayed thoroughly. Longer residual control may be obtained by increasing the rate to 4 lbs, in 25 gats, of water Applications should be made to point of runoff. One gat, of the above spray should cover from 350-750 sq, ft of area, depending on the surface treated. Repeat applications as fly populations warrant.

Balt Sprays: Mix the appropriate amount of D+z+n diazinon 50W with 1 lb. of sugar (or 2 cups of syrup or molasses) for the desired application

For knapsack or similar type sprayer, mix  $\frac{1}{2}$  lb, with the sugar in  $2\frac{1}{2}$  gals, of water and spot treat areas frequented by flies including cracks, crevices, doorways, around windows, or other areas where flies congregate. Repeat applications as fly populations warrant

For sprinkling can application, mix 2 oz. with the sugar in 5 gats of water and sprinkle lightly over the floor in areas frequented by flies. Applications every day or two will generally be required.

Do not contaminate milk, feed, drinking water, or apply to animals or poultry. Do not use in edible product areas of food processing plants or other areas where food is commercially prepared or processed. Do not use in dwellings.

## Insect Control on Ornamentals

### REI-12 hours

To control certain insects on ornamentals, such as Arborvitae, Azalea, Birch, Boxwood, Camellia, Carnation, Chrysanthemum Douglas Fir, Elm, Gladioli, Hawthorn, Holly, Juniper, Lilac, Locust, Maple, Oak, Pine, Ornamental Plum, Poplar, Rhododendron, Rose, Spruce, and Willow, apply the recommended rates indicated below. Try to spray underside of leaves and penetrate dense foliage.

20 921

	Amount of D+z+n diazinon 50W to Use	
Insects .	Rate per 3 gais, water	Rate per 100 gais, water
Aphids, Bagworms, Carnation Bud Mites, Carnation Shoot Mites, Clover Mites, Cyclamen Mites, Diptorous Leafminers, European Pine Shoot Moths, European Red Mites, Flea Beetles, Holly Bud Moths, Leafhoppers, Obscure Root Weevils, Omnivorous Leaftiers, Privet Mites, Scale Crawlers (Cottonycushion, Lecanium, Pine Needle, San José, Soft), Thrips, Two-Spotted Spider Mites, Juniper Webworms, Whiteflies	½ OZ.	1 Ib.
Apple-and-Thorn Skeletonizers. Cotoneaster Webworms, Fall Webworms, Hemiock Chermes, Oak Loopers, Obliquebanded Leafroliers, Pear Slugs, Tent Caterpillars	1½ oz.	3 tbs.

## Note: Do not use on Ferns, Poinsettis, Hiblacus, Papaya, Plice, and Gardenie, since injury to the plants may occur.

Mimose Webworms: Mix ½ oz. In 3 gals, of water (or 1 lb. In 100 gals, of water) and apply as a thorough foliar spray when adults first appear. Make a second and third application at 4.5 week intervals.

## Lawn Pest Control (Excluding Sod Farms and Golf Courses)

Precautions: Birds, especially waterfowl, feeding or drinking on treated areas may be killed. Apply this product only as specified on this label. Because of the migratory habits of certain waterfowl, do not apply in Nassau County, New York between November 1 and May 20. Do not exceed maximum permitted label rates, since rates above those recommended significantly increase potential hazards to birds, especially waterfowl. Avoid overlapping sprays. If waterfowl, i.e., ducks or geese, can be expected to enter treated area after treatment (except spot treatments), water lewn with at least ¼ inch water immediately after application, however, stop imgation before puddling occurs.

## To control pests listed below, apply specified rates.

}

١

	Rete/1000 sq. it.			
Pests	D-z-n diazinon 50W	Water	Remarks	
Lawn Chinch Bugs	2-3 oz.	3 gals.	Use higher rate for longer residual control and in turf- grass of dense growth such as St. Augustine.	
Ants, Armyworms, Bermudagrass Mites, Clover Mites, Springtails ( <i>Collembola</i> ), Crickets, Cutworms, Digger Wasps, Earwigs,		3 gais.	Spot spray ant hills and wasp ground nest openings. For digger wasps, apply product at dusk when wasps are not active.	
Frit Flies, Lawn Billbugs, Leathoppers, Sod Webworms, (Lawn Moths), Sowbugs (Pillbugs), Brown Dog Ticks, Chiggers, Fleas			For frit flies, mow grass and water well before treatment, but delay application until grass is dry.	
			Do not apply to animals.	
			For brown dog ticks, spray grass and under shiubbery.	
Hyperodes Weevils	3 oz.	3 gals.	Treat problem areas in mid-April and again in mid-May.	
Millipedes	3 oz.	3 gais.		
Ahodesgrass Scales	3 oz.	3 gals.	Apply when crawlers first emerge.	
White Grubs, (Japanese Beetle Larvae, European Chafer, Southern Chafer)	3 oz.	3 gals.	Apply any time between late July and early October.	

## Nulsance Pesta in Outside Areas

	Rate/1000 sq. ft.			
Pests	Amount of D-z-n diazinon 50W Water		Remarka	
Ants, Boxelder Bugs, Brown Dog Ticks, Chiggers, Clover Mites, Cockroaches, Crickets, Earwigs, Fleas, Files, Millipedes, Sowbugs (Pillbugs), Spiders, Springtails	3 oz.	. 3 gals.	Spray window and door screens, sills, foundations, porch and patio walls, entranceways, walks, garbage cans, tree trun.s, and into cracks and other places where insects can hide.	
(Coltembola)			To prevent these pests from entering the house, spray a 5-foot band of ground around the house next to the founda- tion, and spray the foundation of the house to a height of 2 to 3 ft. Repeat application as necessary	
			Note: Do not apply to animals. Do not apply to plants (except tree trunks as noted above) at this nuisance pest rate.	
Fire Ants	2 tea- spooris	None	Eventy apply this product in its dry, undiluted state over each fire ant mound	
	1 oz	5 gais	Apply 1 gal. of solution to each mound by sprinkling the mound and the immediate surrounding area until wet. Apply genity to avoid distributing ants	
			Note: For best results, apphr in cool weather (60-80°F, or in early morning or late afternoon when the ants are most active. Treat new mounds as they appear	

## Storage and Disposal

Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited.

Pesticide: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If pesticide, spray mixture, or rinsates cannot be disposed of by use according to label instructions, contact your State Pest cide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container: Completely empty baginto application equipment. Then dispose of empty bagin a sanitary landfill or by incineration, or, if allowed by state and local authorities, by burning. Stay out of smcke from burning container.

For minor spills, leaks, etc., follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes. In the event of a major spill, fire, or other emergency, call 1-800-888-8372, day or night.

## **Precautionary Statements**

Hazards to Humans and Domestic Animals

### CAUTION

Harmful if swallowed, inhaled, or absorbed through skin. Do not breathe dust or spray mist. Avoid contact with skin, eyes, and clothing. Avoid contamination of food and feed. Keepout of reach of domestic animals. Do not use on humans or pets. Do not contaminate ornamental fish ponds. Be sure to read and follow "Work Safety Rules" appearing in this booklet.

## Statement of Practical Treatment

This product is an organophosphate.

If swellowed: Call a physician or Poison Control Center immediately. Drink 1 or 2 glasses of water and induce vomiting by touching back of throat with finger. Repeat until vomit fluid is clear. Do not induce vomiting or give anything by mouth if person is unconscious or convulsing.

If inhaled; Remove victim to fresh air. Apply artificial respiration if indicated. Get medical attention.

If on skin: Remove contaminated clothing and wash affected areas thoroughly with soap and water. Get medical attention.

If in eyes: Flush eyes with plenty of water. Call a physician if irritation develops or persists.

Note to Physician: If symptoms of cholinesterase inhibition are present, atropine sulfate by injection is antidotal. 2-PAM is also antidotal and may be administered, but only in conjunction with atropine.

### Personal Protective Equipment

Applicators and other handlers must wear:

- + Long-sleeved shirt and long pants
- Shoes plus socks
- Waterproof gloves

j

)

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

#### **Engineering Control Statements**

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

### User Safety Recommendations

### Users should:

- · Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- · Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

#### Environmental Hazarde

This product is highly toxic to birds, fish, and other wildlife. Birds, especially waterfowl, feeding or drinking on treated areas may be killed. Because of the migratory habits of Atlantic Coast waterfowl, do not apply this product to lawns in Nassau County, New York, between November 1 and May 20. Do not exceed maximum permitted label rates. Rates above those recommended significantly increase potential hazards to birds and waterfowl. Avoid overlapping of sprays. On lawns, if waterfowl, i.e., ducks or geese, can be expected in the treated area after treatment (except spot treatment), apply a minimum of ½ inch of water immediately after applying this product. Stop irrigation before puddling occurs, respond lakes, streams, ponds, it dal marshes, and estuaries. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Shrimp and crab may be killed at application rates recommended on this label. Do not apply where fish, shrimp, crab, and other aquatic life are important resources. Do not contaminate water by cleaning of equipment or disposal of equipment wash waters.

This pesticide is highly toxic to bees exposed to direct treatment or to residues on blooming crops or weeds. Do not apply this pesticide or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.

**Physical or Chemical Hazards** 

Do not use, pour, spill, or store near heat or open flame
