Pramitol 5PS

General Information

Pramitol 5PS is a nonselective herbicide that can be applied before or after plant growth begins. Since Pramitol enters plants through their roots, its effectiveness is dependent on rainfall to move the chemical into the root zone. Very dry soil conditions and lack of rainfall may result in poor weed control.

Important: Use only in areas where complete control of all vegetation is desired, such as industrial sites, rights-of-way, lumberyards, petroleum tank farms, around farm buildings, along fence lines and similar areas. When applied to the soil, this product usually inhibits all plant growth for a year or more. It should not be used on land to be cropped, or near adjacent desirable trees, shrubs, or plants, or injury may occur.

Directions for Use

To control annual broadleaf weeds and grasses: Apply 1/2-1 lb. per 100 sq. ft.

To control most perennial broadleaf weeds and grasses: Apply 1-2 lb. per 100 sq. ft. Where deep-rooted perennials are present, use the 2 lb. rate.

The higher rates listed above should be used in areas having a long growing season or high rainfall. The higher rates will also provide longer residual control.

Caution

Keep out of reach of children.

Harmful if swallowed. Avoid contamination of food and feed. Avoid inhalation of dust. Avoid contact with eyes, skin, and clothing. Wash clothing after handling. Wash out equipment after application. Do not use equipment to apply insecticides, fungicides, or fertilizers. Do not contaminate water intended for domestic or irrigation use.

Do not reuse container. Destroy when empty.

Store in dry place.
