#### **Mixing Procedures**

Apply Dividend as a water-based slurry through standard slurry or mist-type seed treatment equipment that accurately meters and mixes a liquid flowable seed treatment. The mix tank should be equipped with a mechanical or paddle agitator to ensure uniform blending of the slurry. The equipment must provide uniform coverage of Dividend on the seed. Uneven seed coverage may not give the desired level of disease control. Consult the manufacturer of the application equipment you plan to use for suitability for this application and for instructions on the operation and calibration of the equipment.

Fill the mix tank ¼-½ full with clean water (see maximum recommended slurry volume table below). Start agitation of the mix tank. Next, open the container and add the recommended amount of Dividend into the mix tank, and maintain agitation. Thoroughly blend the mixture while adding the remainder of the required water.

After the mixture appears completely uniform, begin application to the seed. Mix the slurry thoroughly with the seed to provide uniform coverage.

Crop	Maximum fl. oz. slurry per 100 lbs. seed		
Wheat and Barley	16		
Canola	23		
Sweet Corn	8 to 16		
Cotton	30		

The following table lists the maximum recommended total slurry volumes by crop.

#### **Tank Mixtures**

Confirm physical compatibility, seed safety, seed safety in stored seed, and biological efficacy before tank mixing with other seed treatment products.

Follow the label directions for the most restrictive of label precautions and limitations. This product cannot be mixed with any product containing a label prohibition against is such mixing.

# SEED BAG LABEL REQUIREMENT

Federal law requires that bags containing treated seeds shall be labeled with the following information: "This seed has been treated with difenoconazole fungicide. Do not use for feed, food, or oil purposes. Store away from feeds and foodstuffs. Use with an EPA-approved dye or colorant that imparts an unnatural color to the seed. Green wheat or triticale forage may not be grazed until 55 days after planting. Green barley forage may not be grazed until 30 days after planting. Do not plant any crop other than those on this label within 30 days to fields in which treated seeds were planted."

#### BARLEY

Apply Dividend to barley seed at the rates given in the following table:

Rate Dividend Per 100 lb seed	Diseases Controlled	Diseases Partially Controlled <sup>1</sup>		
0.5 fl. oz.	Barley Stripe General Seed Rots <sup>2</sup> Covered Smut Pythium Damping Off	Common Root Rot ( <i>Cochiliobolus</i> spp.) Fusarium Seed Scab Rhizoctonia Root Rot

<sup>1</sup>Partial control can either mean erratic control from good to poor, or consistent control at a level below that is generally considered acceptable for commercial disease control.

<sup>2</sup> General seed rots controlled include those caused by saprophytic organisms such as *Penicillium* spp. and *Aspergillus* spp.

## COTTON

Apply Dividend at a rate of 0.5 to 1.45 fl. oz. of product per 100 lbs. of seed for protection against preemergent and postemergent damping off seedling diseases caused by *Rhizoctonia* spp. and *Fusarium* spp. Use the higher rate where disease is expected to be severe. Always apply in combination with Apron XL® LS for activity against seed and seedling diseases caused by *Pythium* spp. Follow application and other instructions found on the Apron XL LS product label.

#### SWEET CORN

Apply Dividend at a rate of 0.5 to 1.24 fl. oz. of product per 100 lbs. of seed for control of die-back in sweet corn caused by *Penicillium* spp., *Fusarium* spp. and *Aspergillus* spp. Confirm physical compatibility, seed safety, seed safety in stored seed, and biological efficacy before tank mixing with other seed treatment products.

#### WHEAT AND TRITICALE

Apply Dividend to wheat or triticale seed at the rates given in the following table.

For control of damping-off of wheat caused by *Pythium* spp., the recommended rate of Dividend must be tank mixed with Apron XL LS in accordance with the most restrictive label limitations and precautions. No labeled dosage rate should be exceeded. Use Apron XL LS at a rate of 0.016 oz. active ingredient per 100 lbs. of seed (1 g of the active ingredient/100 kg of seed) tank mixed with the recommended rates of Dividend. Higher rates of Apron XL LS may be used in combination with Dividend if disease pressure is expected to be severe. Follow application and other instructions found on the Apron XL LS label.
