Teresa S Cox Regulatory Product Manager Syngenta Crop Protection, LLC P O Box 18300 Greensboro, NC 27419-8300

OCT 1 2 2012

Subject Vangard® WG Fungicide EPA Reg No 100-828 EPA Decision Number 447573 and 448807 Your supplement label submitted on March 10, 2011 and the revised master and supplement labels submitted on October 4, 2012 for additional crops as noted below

Dear Mrs Cox

The labels referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), for use on Bushberry Subgroup 13-07B, Caneberry Subgroup 13-07A, Onion, Bulb, Subgroup 3-07A, Onion, Green, Subgroup 3-07B, Small Fruit Vine Climbing Subgroup 13-07F (except fuzzy kiwifruit), Dragon Fruit, Vegetable, leafy (except brassica) Subgroup 04A, Leaf Petiole Subgroup 04B, Fruiting Vegetable Group 8-10, Low Growing Berry Subgroup 13-07G (except cranberry) and Pome Fruit Group 11-10, as amended are acceptable

One copy of the labels stamped "Accepted" are enclosed for your records Please submit one copy of the final printed label before the product is released for shipment You must incorporate this supplemental into your master label within 18 months or at your next label printing, whichever comes first If you have any questions, please contact Marcel Howard by phone at 703-308-0034 or via email at <u>Howard Marcel@epa gov</u>

Sincerely,

Cfgil be

Cynthia Giles-Parker Acting Product Manager 20 Fungicide Branch Registration Division

Enclosure Stamped master and supplemental labels "Accepted"

#### Vangard® WG

Fungicide

# This supplemental label expires on August 30, 2015 and must not be used or distributed after this date

Active IngredientCyprodinil 4-cyclopropyl-6-methyl-N-phenyl-pyrimidinamine\*75 0%Other Ingredients25 0%Total100 0%

\*CAS No 121552-61-2

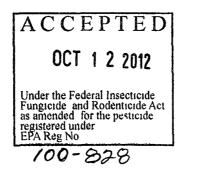

Vangard WG is a water-dispersible granule

### KEEP OUT OF REACH OF CHILDREN

### CAUTION

EPA Reg No 100-828

All applicable directions, restrictions and precautions on the EPAregistered label are to be followed Before using Vangard WG as permitted according to this Supplemental Labeling, read and follow all applicable directions, restrictions, and precautions on the EPA-registered label on or attached to the pesticide product container This Supplemental Labeling contains revised use instructions and/or restrictions that may be different from those that appear on the container label. This Supplemental Labeling must be in the possession of the user at the time of pesticide application It is a violation of Federal Law to use this product in a manner inconsistent with its labeling

ł.

#### **Precautionary Statements**

#### Hazards to Humans and Domestic Animals

#### CAUTION

Causes moderate eye irritation Harmful if absorbed through skin. Avoid contact with skin, eyes, or clothing Wash thoroughly with soap and water after handling and before eating drinking, chewing gum or using the toilet Remove and wash contaminated clothing before reuse

#### Personal Protective Equipment (PPE)

Handlers applying this product as a preplant dip to strawberry roots and crowns and workers packaging or preparing treated roots and crowns for shipment must wear

- Chemical-resistant apron made of any waterproof material
- Elbow-length chemical-resistant glove made of any waterproof material
- Chemical-resistant boots made of any waterproof material

#### All other applicators and other handlers must wear

- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material
- Shoes plus socks

# In addition, mixers and loaders for aerial and groundboom applications must wear

• Filtering facepiece respirator (N95, R95, or P95) (e.g., a dustmask)

#### **PRECAUTIONARY STATEMENTS**

#### Hazards to Humans and Domestic Animals

#### CAUTION

Causes moderate eye irritation Harmful if absorbed through skin Avoid contact with skin eyes, or clothing Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco or the toilet Remove and wash contaminated clothing before reuse

#### **Personal Protective Equipment (PPE)**

Some materials that are chemical-resistant to this product are listed below If you want more options, follow the instructions for Category A on an EPA chemical-resistance category selection chart

Handlers applying this product as a pre-plant dip to strawberry roots and crowns and workers packaging or preparing treated roots and crowns for shipment must wear

- Chemical-resistant apron made of any waterproof material
- Elbow-length chemical-resistant gloves made of any waterproof material
- Chemical-resistant boots made of any waterproof material

- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof materials such as polyethylene or polyvinyl chloride
- Shoes plus socks

# In addition, mixers and loaders for aerial and groundboom applications must wear

• Filtering facepiece respirator (N95, R95, or P95) (e.g. a dustmask)

#### User Safety Requirements

Follow manufacturer's instructions for cleaning/maintaining PPE If no such instructions for washables exist, use detergent and hot water Keep and wash PPE separately from other laundry

#### Engineering Control Statements

When handlers use closed systems enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170 240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS

#### **User Safety Recommendations**

#### Users should

- Wash hands before eating, drinking, chewing gum using tobacco, or using the toilet
- Remove clothing immediately if pesticide gets inside Then wash thoroughly and put on clean clothing

#### Environmental Hazards

This pesticide is toxic to fish and aquatic invertebrates For terrestrial uses Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark Do not apply when weather conditions favor drift from treated areas Drift and runoff from treated areas may be hazardous to aquatic organisms in water adjacent to treated areas Do not contaminate water when disposing of equipment washwater or rinsate

#### Surface and Ground Water Advisory

This chemical may contaminate water through runoff This product may impact surface water quality due to runoff of rain water This is especially true for poorly draining soils and soils with shallow ground water This chemical has a potential for runoff for several months or more after application Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this chemical A level, well maintained vegetative buffer strip between areas to which this chemical is applied and surface water features such as ponds streams, and springs will reduce the potential loading of cyprodinil from runoff water and sediment Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours Sound erosion control practices will reduce this product s potential to reach aquatic sediment via runoff

#### **Physical or Chemical Hazards**

Do not use, pour, spill or store near heat or open flame

#### CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

**NOTICE** Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before using this product If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded

The Directions for Use of this product must be followed carefully It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, LLC or Seller To the extent permitted by applicable law, Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. To the extent permitted by applicable law (1) this warranty does not extend to the use of the product contrary to label instructions or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and (2) Buyer and User assume the risk of any such use. TO THE EXTENT PERMITTED BY APPLICABLE LAW, SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS WARRANTED BY THIS LABEL

To the extent permitted by applicable law, in no event shall SYNGENTA be liable for any incidental, consequential or special damages resulting from the use or handling of this product TO THE EXTENT PERMITTED BY APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA

Vangard WG Page 5

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application For any requirements specific to your State or Tribe consult the agency responsible for pesticide regulation

#### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170 This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard

## Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is

Coveralls

1

- Chemical-resistant gloves made of any waterproof material
- Shoes plus socks

#### PRODUCT INFORMATION

Vangard WG is a broad spectrum fungicide which controls certain diseases in fruits, herbs, nuts and vegetables

#### **PRODUCT USE PRECAUTIONS**

#### FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR DISEASE CONTROL, AND/OR ILLEGAL RESIDUES

Vangard WG Page 7

#### **APPLICATION INFORMATION**

Vangard WG fungicide has preventative and systemic properties and is labeled for the control of many important plant diseases. Vangard WG provides excellent disease control of Botrytis, several leaf spots and powdery mildews. Vangard WG is applied as a foliar spray and can be used in block, alternating spray, or tank-mix programs with other crop protection products. Make all applications according to the use directions that follow.

#### **PRODUCT USE INSTRUCTIONS**

**Application** Thorough coverage is necessary to provide good disease control Make no more spray solution than is needed for application Avoid spray overlap, as crop injury may occur

Adjuvants When an adjuvant is to be used with this product Syngenta recommends the use of a Chemical Producers and Distributors Association certified adjuvant

**Efficacy** Under certain conditions conducive to extended infection periods, use another registered fungicide for additional applications if the maximum amount of Vangard WG has been used If resistant isolates to Group 9 fungicides are present, efficacy can be reduced for certain diseases. The higher rates in the rate range and/or shorter spray intervals may be required under conditions of heavy infection pressure, with highly susceptible varieties, or when environmental conditions are conducive to disease.

**Integrated Pest Management (IPM)** Integrate Vangard WG into an overall disease and pest management strategy whenever the use of a fungicide is required Follow cultural practices known to reduce disease Consult your local agricultural authorities for additional IPM strategies established for your area Vangard WG may be used in State Agricultural Extension advisory (disease forecasting) programs which recommend application timing based on environmental factors favorable for disease development

#### **RESISTANCE MANAGEMENT**

#### GROUP 9 FUNGICIDE

Vangard WG contains the fungicide cyprodinil, an anilinopyrimidine in Group 9 A disease management program that includes alternation or tank mixes between Vangard WG and other labeled fungicides that have a different mode of action is essential to prevent pathogen populations from developing resistance to Vangard WG Do not alternate or tank mix this product with fungicides to which resistance has already developed. Vangard WG may be applied in an alternating or blocking program.

As part of a resistance management strategy

- Apply no more than 2 sequential applications unless otherwise stated in the crop section
- When tank mixing or alternating use an effective partner one that provides satisfactory disease control when used alone at the mixture rate

**Crop Tolerance** Plant tolerance has been found to be acceptable for all crops on the label however, not all possible tank-mix combinations have been tested under all conditions. When possible, test the combinations on a small portion of the crop to ensure that a phytotoxic response will not occur as a result of application.

**Spray Drift Management** To avoid spray drift, do not apply when conditions favor drift beyond the target area The interaction of many equipment and weather related factors determine the potential for spray drift AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR AND THE GROWER More information on managing spray drift can be found on the SYNGENTA CROP PROTECTION website under Stewardship (<u>http://www.syngentacropprotection-us.com/enviro/driftmanagement/index.asp?nav=drift\_management</u>)

#### **Rotational Crop Restrictions**

Do not plant any crop which is not registered for use with cyprodinil for a period of 30 days, unless a shorter interval is specified on the following list

Vangard WG Page 8

Rotation Crop	Planting Time From Last Vangard WG Application
Beans (dried and succulent except cowpeas)*	
Berries (bushberries 13-07B, caneberries 13-07A)*	
Brassica (Cole) Leafy Vegetables*	
Cucurbits*	
Herbs (fresh and dried)*	
Leafy Vegetables*	
Leaves of Root and Tuber Vegetables*	0 dava
Onions (dry bulb, including garlic and green)	0 days
Peppers	
Root Vegetables except Sugar beet*	
Strawberries	
Tomatoes and tomatillos	

 Crops Not Intended for Food or Feed

 All Other Crops Intended for Food or Feed
 30 days

\*See the complete crop lists for these groups in CROP USE DIRECTIONS - BERRIES FRUITS, HERBS AND VEGETABLES section later in this label

In annual crops where multiple crops can be grown per year (double/triple cropping), do not apply more than 1.3 lb a i per acre per year to an individual plot of land

#### **APPLICATION AND MIXING PROCEDURES**

#### Mixing

Watercress

Prepare no more spray mixture than is needed for the immediate operation Thoroughly clean spray equipment before using this product Vigorous agitation is necessary for proper dispersal of the product Maintain maximum agitation throughout the spraying operation. Do not let the spray mixture stand overnight in the spray tank Flush the spray equipment thoroughly following each use and apply the rinsate to a previously treated area. Buffer the spray solution to a pH of 5 0-7 0 when tank mixed with Rovral® Fungicide

**Vangard WG Alone** Add ½ of the required amount of water to the mix tank. With the agitator running, add the Vangard WG to the tank. Continue agitation while adding the remainder of the water. Begin application of the solution after the Vangard WG has completely dispersed into the mix water. Maintain agitation until all of the mixture has been applied.

**Vangard WG + Tank Mixtures** Add ½ of the required amount of water to the mix tank Start the agitator running before adding any tank-mix partners In general, add tank-mix partners in this order products packaged in water-soluble packaging, wettable powders, wettable granules (dry flowables) such as Vangard WG, liquid flowables, liquids and emulsifiable concentrates Always allow each tank-mix partner to become fully dispersed before adding the next product Provide sufficient agitation while adding the remainder of the water Maintain agitation until all the mixture has been applied

Vangard WG Page 10

When using Vangard WG in tank mixtures add all products in water-soluble packaging to the tank before any other tank-mix partner including Vangard WG Allow the water-soluble packaging to completely dissolve and the product(s) to completely disperse before adding any other tank-mix partner to the tank

If using Vangard WG in a tank mixture, observe all directions for use crops/sites, use rates, dilution ratios, precautions, and limitations which appear on the tank mix product label. Do not exceed label dosage rates, and follow the most restrictive label precautions and limitations. Vangard WG must not be mixed with any product which prohibits such mixing. Tank mixtures or other applications of products referenced on this label are permitted only in those states in which the referenced products are registered.

Additives Vangard WG is compatible with most crop protection additives Do not use X-77® with Vangard WG for bloom sprays applied to stone fruits, almonds and pistachios

#### Application

For best disease control apply Vangard WG in sufficient water to provide thorough and uniform coverage Use minimum ground spray volumes of 50 gals /A for tree crops, 30 gals /A for vine crops, and 15 gals /A for field and vegetable crops For aerial application see spray volume requirements in the specific crop directions for use

To prevent spray drift, do not apply when conditions favor drift beyond the target area Spray overlap may cause crop injury

For air assisted or air blast sprayers move spray droplets into the canopy using a forced air stream. Set up the fan to deliver only enough air volume to penetrate the canopy and provide good coverage. Adjust deflectors or other aiming devices to direct spray only to the target area.

Equip sprayers with nozzles that provide accurate and uniform application Check whirl plates and nozzle discs for wear and replace as necessary Calibrate sprayer before use

Use screens to prevent nozzles from clogging Use 50-mesh or coarser screens placed after the tank and before the nozzles Check nozzle manufacturer's recommendations

For more information on spray equipment and calibration, consult sprayer manufacturers and state recommendations For specific local directions and spray schedules, consult the current state agricultural experiment station recommendations

#### OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, ESTUARIES, AND COMMERCIAL FISH PONDS

- Do not apply within 75 ft of bodies of water such as lakes, reservoirs, rivers, permanent streams, natural ponds, marshes or estuaries
- Shut off the sprayer when row ends
- Do not cultivate within 10 ft of aquatic areas in order to allow a vegetative filter strip
- Do not apply when weather conditions favor drift to aquatic areas Do not apply when gusts or sustained winds exceed 10 mph
- Do not apply during a temperature inversion Mist or fog may indicate the presence of an inversion in humid areas
- For perennial crops such as tree crops and grapes
  - For all plantings within 150 ft of bodies of water as described above spray crops from outside the planting away from the bodies of water
  - Spray last three rows windward of aquatic areas using nozzles on one side only, with spray directed away from aquatic areas Adjust or turn off top nozzles to prevent spray going over the tops of trees Shut off nozzles on the side away from the grove/orchard when spraying the outside row Shut off nozzles when turning at ends of row or passing tree gaps in the rows

#### Aerial Spray Precautions

Avoid applications under conditions when uniform coverage cannot be obtained or when excessive drift may occur

Observe the following precautions when spraying in the vicinity of aquatic areas such as lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries and commercial fish ponds

- Use only on crops where aerial applications are indicated
- Do not apply by air within 150 ft of lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries and commercial fish ponds
- For aerial applications mount the spray boom on the aircraft so as to minimize the drift caused by wing tip vortices. Use the minimum practical boom length which must not exceed 75% of wing span or rotor diameter.
- Use the largest droplet size consistent with good pest control. Formation of very small droplets may be minimized by appropriate nozzle selection, by orientating nozzles away from the air stream as much as possible, and by avoiding excessive spray boom pressure.
- Release spray at the lowest height consistent with pest control and flight safety Do not make applications more than 10 feet above the crop canopy
- Risk of exposure to aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area
- Do not apply when weather conditions favor drift to aquatic areas Do not apply when gusts or sustained winds exceed 10 mph
- Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of increased spray drift to aquatic area. Avoid spraying during conditions of low humidity and/or high temperatures
- Do not apply during a temperature inversion Mist or fog may indicate the presence of an inversion in humid areas

#### Application Through Irrigation Systems (Chemigation)

١

- Use only on crops for which chemigation is specified on this label
- Apply this product only through center pivot, solid set, hand move, or moving wheel irrigation systems Do not apply this product through any other type of irrigation system
- Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water
- Apply in 0 125-0 25 inches/A of water Excessive water may reduce efficacy
- If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts

• Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system, unless the pesticide label-prescribed safety devices for public water systems are in place

ſ

• A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person shall shut the system down and make necessary adjustments should the need arise

**Note** Do not inject Vangard WG at full strength or deterioration of valves and seals may occur. Use a dilution ratio of at least 10 parts water to 1 part Vangard WG Vangard WG is corrosive to many seal materials. Leather seals are best EPDM or silicone rubber seals can be used but should be replaced once a year. Do not use Viton® Buna-N Neoprene, or PVC seals.

#### **Operating Instructions**

- 1 The system must contain a functional check-valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent watersource contamination from backflow
- 2 The pesticide injection pipeline must contain a functional, automatic, quickclosing check-valve to prevent the flow of fluid back toward the injection pump
- 3 The pesticide injection pipeline must also contain a functional normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down
- 4 The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops
- 5 The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected
- 6 Systems must use a metering pump, such as a positive displacement injection pump (e g, diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock
- 7 Do not apply when wind speed favors drift beyond the area intended

#### **Center Pivot Irrigation Equipment**

**Notes** (1) Use only with drive systems which provide uniform water distribution (2) Do not use end guns when chemigating Vangard WG through center pivot systems because of non-uniform application

- Determine the size of the area to be treated
- Determine the time required to apply <sup>1</sup>/<sub>8</sub>-<sup>1</sup>/<sub>2</sub> inch of water over the area to be treated when the system and injection equipment are operated at normal pressures as recommended by the equipment manufacturer. When applying Vangard WG through irrigation equipment use the lowest obtainable water volume while maintaining uniform distribution. Run the system at 80-95% of the manufacturer's rated capacity.
- Using water determine the injection pump output when operated at normal line pressure
- Determine the amount of Vangard WG required to treat the area covered by the irrigation system
- Add the required amount of Vangard WG and sufficient water to meet the injection time requirements to the solution tank
- Make sure the system is fully charged with water before starting injection of the Vangard WG solution Time the injection to last at least as long as it takes to bring the system to full pressure
- Maintain constant solution tank agitation during the injection period
- Continue to operate the system until the Vangard WG solution has cleared the sprinkler head

#### Solid Set, Hand Move, and Moving Wheel Irrigation Equipment

- Determine the acreage covered by the sprinklers
- Fill injector solution tank with water and adjust flow rate to use the contents over a 20 to 30-minute interval. When applying Vangard WG through irrigation equipment use the lowest obtainable water volume while maintaining uniform distribution.
- Determine the amount of Vangard WG required to treat the area covered by the irrigation system
- Add the required amount of Vangard WG into the same quantity of water used to calibrate the injection period
- Operate the system at the same pressure and time interval established during the calibration
- Stop injection equipment after treatment is completed. Continue to operate the system until the Vangard WG solution has cleared the last sprinkler head.

#### SPECIFIC INSTRUCTIONS FOR PUBLIC WATER SYSTEMS

- 1 Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year
- 2 Chemigation systems connected to public water systems must contain a functional reduced-pressure zone, back-flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
- 3 The pesticide injection pipeline must contain a functional automatic quickclosing check valve to prevent the flow of fluid back toward the injection pump
- 4 The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down
- 5 The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected
- 6 Systems must use a metering pump such as a positive displacement injection pump (e g, diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock
- 7 Do not apply when wind speed favors drift beyond the area intended for treatment

# STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

# Pesticide Storage

Store in a cool, dry, secure place.

# Pesticide Disposal

Pesticide wastes may be toxic. Improper disposal of unused pesticide, spray mixture, or rinse water is a violation of Federal law. If these wastes cannot be used according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance in proper disposal methods.

# Container Handling [less than or equal to 5 gallons]

Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration.

### **Precautionary Statements**

#### Hazards to Humans and Domestic Animals

Causes moderate eye irritation Harmful if absorbed through skin Avoid contact with skin eyes, or clothing Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco or the toilet Remove and wash contaminated clothing before reuse

#### **Environmental Hazards**

This pesticide is toxic to fish and aquatic invertebrates For terrestrial uses Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark Do not apply when weather conditions favor drift from treated areas Drift and runoff from treated areas may be hazardous to aquatic organisms in water adjacent to treated areas Do not contaminate water when disposing of equipment washwater or rinsate

## Surface and Ground Water Advisory

This chemical may contaminate water through runoff This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This chemical has a potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this chemical. A level, well

maintained vegetative buffer strip between areas to which this chemical is applied and surface water features such as ponds streams, and springs will reduce the potential loading of cyprodinil from runoff water and sediment Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours Sound erosion control practices will reduce this product's potential to reach aquatic sediment via runoff

### **Physical or Chemical Hazards**

Do not use, pour spill or store near heat or open flame

## STORAGE AND DISPOSAL

Do not contaminate water food or feed by storage and disposal

#### Pesticide Storage

Store in a cool dry, secure place

#### **Pesticide Disposal**

Pesticide wastes may be toxic Improper disposal of unused pesticide, spray mixture, or rinse water is a violation of Federal law If these wastes cannot be used according to label instructions contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance in proper disposal methods

#### Container Handling [less than or equal to 5 gallons]

Non-refillable container Do not reuse or refill this container Triple rinse container (or equivalent) promptly after emptying Triple rinse as follows Empty the remaining contents into application equipment or a mix tank Fill the container ¼ full with water and recap Shake for 10 seconds Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal Drain for 10 seconds after the flow begins to drip Repeat this procedure two more times Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration

#### Chemigation

Do not apply this product through any type of irrigation system
