

LIQWEEDATE-2

herbicide and brush killer from Brulin

To prove effectiveness of Liqweedate-2 we picked at random a heavily weeded corner in a vacant lot. Exposed rubble is where Liqweedate-2 was sprayed on a May day in Indiana. Note complete kill. Unsprayed vegetation in foreground indicates type growth removed and still remaining.

CONTROLS ANNUAL AND PERENNIAL WEEDS

... including poison ivy, hard-to-kill species such as Johnson grass, Bermuda grass, bindweed (wild morning glory) and wild carrot.

IS EXACTLY THE PRODUCT BEHIND THE NAME

... it's a liquid concentrate.
... it's strictly for weeds — (so should be kept from desirable plants, flowers, shrubs and trees)

HOW ABOUT COST?

Would you believe? ... use dilutions of Brulin's LIQWEEDATE-2 compare favorably in cost-per-thousand square feet to the cheapest granular and liquid nonselective weed killers ... including arsenic types

LIQWEEDATE-2

E.P.A. Registration No. 106-55

DESCRIPTION

Industrial weed control can be accomplished by the application of Liqweedate-2. Kills weeds two ways: 1) through burn down activity or contact action, 2) through root absorption by the weed.

Liqweedate-2 is:

- Non-corrosive to equipment, fences, pipelines.
- Offers length of weed control for one complete season.
- Costs less than most soil sterilants on the market.
- Provides season-long residual effect — saves time and money.
- Exhibits little lateral leaching.

DEFINE YOUR WEED PROBLEM

In order to make the correct selection, each user must define his own weed problem.

Weeds can be broadly classified into two general groups: 1) annuals and 2) perennials.

Brulin's Liqweedate-2 is a herbicide and brush killer which, when properly mixed and applied, controls most woody plants, annuals and many perennial broadleaf weeds for a full season or longer, with one application. Designed for use on fence rows, drainage ditch banks, railroad and utility right-of-ways, industrial and recreational areas, lumber yards, refineries and airports.

Much of Liqweedate-2 activity is through the roots. Adequate rainfall is desirable for best results.

SPECIFICATIONS

Form Liquid Concentrate
Color Tan
Weight per gallon 7.24

To Apply: Use spraying equipment adjustable to provide coarse, defoliating spray. Coarse sprays are less likely to drift.

Coverage 1 1/4 — 2 quarts per 1,000 square feet
or
12 1/2 to 20 gallons per acre

Suggested amounts of diluent to cover

Water 2-4 gallons per 1,000 square feet
50-100 gallons per acre
Diesel or fuel oil 100-200 gallons per acre

Active Ingredients:

2-methoxy-4,6-bis(isopropylamino)-s-triazine*	10.0%
Isooctyl Ester of 2,4-Dichlorophenoxyacetic Acid**	5.4
Active ingredients total	15.4%

Inert Ingredients:

84.6
100.0%

*Prometon—Geigy Chemical Corp., U.S. Pat. 2,909,420
**Equivalent to 3.58% of 2,4-Dichlorophenoxyacetic Acid

CAUTIONS

As with any chemical spray, LIQWEEDATE-2 solutions should not be used near feed or foodstuffs, potable water, or where danger of ingestion exists. Nor should it be used close to desirable adjacent trees, shrubs, plants or irrigation supplies, because of the potential damage to desirable vegetation. Cautions regarding handling of the equipment are also designed to safeguard against damage to desirable vegetation. See product label for complete statement as to cautions and container disposal, as required by the U.S. Environmental Protection Agency.
