U.S.D.A. REG. NO. [illegible]

DIRECTIONS

Fogging Concentrate is especially compounded for use about mills, elevators, boxcars, granaries, canneries, bottling plants, breweries, food processing plants, packing houses, bakeries, markets, restaurants, stores, hotels, theaters and similar establishments. For effective insect kill of a variety of insects with a Thermal Fog Generator, a setting producing a dry fog is recommended.

Fogging Concentrate should be used full strength at the rate of 1 to 2 ounces per each 1000 cubic feet of space in the area to be treated. In all cases dosage should be sufficient to thoroughly fill the enclosure with fog or vapor.

When used as directed, Fogging Concentrate quickly kills on contact the exposed susceptible stages of flies, gnats, mosquitoes, ants, roaches, spiders, scorpions, wasps, hornets, moths, clover mites, cheese mites, cheese skippers and most common stored grain pests, including granary weevil, rice weevil, confused flour beetle, rust red flour beetle, cadelle, saw toothed grain beetle, spider beetle, angoumois grain moth, Mediterranean flour moth, Indian meal moth, meal worms, cigarette beetle, drug store beetle and grain mites.

CAUTION: Use this product as a space spray in food processing plants only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using.

[illegible]

Fogging Concentrate is a fast acting high quality, scientifically balanced insecticide especially designed for use in specialized insecticide dispensing equipment such as Thermal Fog Generators, compressed Air applicators, Aerosol Generators and similar devices.

Fogging Concentrate is composed of Pyrethrins and Piperonyl butoxide. It can be used around food, food products, utensils and equipment, but should not be applied directly onto uncovered food products or food stuffs.
