A spray for fungus disease in flowers.

A COPPER ETHER OIL BLEND

Destruxol KOPPERSOL is for the preventative control of Powdery Mildew and Rust on roses, snapdragons, chrysanthemums, crepe myrtle and other ornamentals and black spot on roses.

Fungus diseases are more easily controlled by preventive treatment, therefore it is advisable to spray in advance of visible stages of fungi. Repetition of treatment is advisable as temperature and moisture conditions warrant. Destruxol KOPPERSOL, when sprayed on plant life according to directions, will leave no visible or unsightly residue. The blooms of certain varieties of flowers, such as red carnations, may be slightly spotted due to its use.

DIRECTIONS FOR USE

Shake well before using. Fill sprayer partly full of water. While agitating contents, add Destruxol KOPPERSOL at the following dilutions:

- 2 teaspoonfuls per 1 quart of water
- 2 tablespoonfuls per gallon of water
- 8 ounces (1 cupful) per 10 gallons of water
- 1 gallon per 160 gallons of water

Add balance of water. Spray thoroughly. Covering both the under and upper sides of the leaves. This material may be used in all of the popular types of hose-end sprayers so long as the manufacturers directions are followed. Destruxol KOPPERSOL contains wetting and spreading agents, no additives for this purpose are necessary.

CAUTION: Harmful if swallowed, keep out of reach of children. Do Not use or store near heat or open flame. When container is empty, wash immediately and destroy.

ACTIVE INGREDIENTS:

- *Copper Oleate 11.0%
- Ethylene Dichloride 3.0%

INERT INGREDIENTS:

- *Copper as metallic 86.0%
