[BACK CONTAINER PANEL - DEXOL DEXA-KLO? PEST CONTROL]

DIRECTIONS FOR USE: It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Dexol Dexa-Klor Pest Control is a water-based, ready-to-use insecticide that effectively controls fleas and brown dog ticks indoors and outdoors. Easy to use. No mixing or measuring. Spray surfaces thoroughly and repeat as necessary. Spot test for color fastness before spraying. Will not stain or leave oily residue. Use for spot treatment on upholstery, carpeting, floors, walls, pet beds etc. indoors as well as outdoors on non-crop bushes, lawns and soil areas.

INDOORS: Thoroughly apply a fine mist spray as a spot treatment to infested areas such as pet beds and resting quarters, nearby cracks and crevices; along and behind baseboards, window and door frames and localized areas of floor and floor covering, including carpeting. Old bedding of pets should be removed and replaced with clean fresh bedding after treatment of pet area. DO NOT TREAT PRTS WITH THIS PRODUCT. To control the source of flea infestation, pets inhabiting the treated premises should be treated with a product registered for application to animals. Repeat treatment in 7-10 days to kill newly hatched fleas which may have hatched from eggs in the carpet or other areas. Repeat as necessary. Keep children and pets out of sprayed areas until spray has dried completely. Remove pets and cover fish tanks before spraying.

Do not allow spray to contact food, foodstuffs and water supplies. Thoroughly wash dishes and food handling utensils with soap and water if they become contaminated by this product.

OUTDOORS: Thoroughly spray localized infestations of fleas and brown dog ticks on weeds, bushy non-crop areas, shrubs, lawns and soil areas or wherever else these pests occur. Thoroughly wet ant hills and runways. Repeat applications as reinfestations occur.

Fleas are a common problem in homes with pets such as dogs and cats. They bite and suck blood, leaving an itchy red blotch. Infestations can last months after pets are out of the house without proper spraying to control them. The adult flea is a tiny, wingless insect with a hard body. Its sides are flattened with rows of backward-slanting spines, which enable it to move easily through the hairs of pets. The time for completion of the life cycle of the flea varies but can be completed within two weeks. The female lays her eggs among the hairs of the animals. These eggs drop off and hatch in carpeting, crevices in floors, along baseboards and between cushions in furniture. Fleas and ticks are a year-round problem, but Meaviest infestations occur from spring through fall.

STORAGE & DISPOSAL

Storage: Keep pesticide in original container. Store in a cool, dry place and preferably in a locked storage area inaccessible to children and pets. Disposal: Do not reuse empty container. Wrap container in several layers of newspaper and discard in trash.
