DEXOL DEVRINOL® WEED CONTROL

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Apply this product as specified on this label.

Dexol Devrinol® Weed Control should be spread evenly on the soil surface.

Dexol Devrinol® Weed Control is a pre-emergence herbicide for weed control in gardens and landscaping. It can be used on deciduous and evergreen trees, shrubs, ground covers, perennials, fruits and nuts and container grown plants. Dexol Devrinol® Weed Control should be used before weeds germinate as it will not control established weeds.

Application can be made anytime of the year to weed-free soil. Fall and winter applications will provide excellent weed control the following spring and summer.

In containers apply after setting and watering the plants.

When weed infestation is heavy or when broadleaves are the primary weeds use one pound on 145 square feet (7 lbs 1,000 sq. ft.). For annual grassy weeds or when weed infestation is light use one pound on 218 square feet (5 lbs 1,000 sq.ft.).

Dexol Devrinol® Weed Control should be incorporated evenly into the soil using a hand cultivator to a depth of 1-2 inches or irrigation or natural moisture (rainfall or snow) (1-2 inches within 2-3 days) for optimum results.

For weed control in dichondra, apply at the time of seeding or to established dichondra including dichondra sod. Irrigate with a minimum of one inch of water.

Dexol Devrinol® Weed Control controls certain annual grassy and broadleaf weeds as they germinate. It does not control established weeds.
