AZODRIN[®] 3.2 INSECTICIDE WATER MISCIBLE (ORGANIC PHOSPHATE COMPOUND MIXTURE LIQUID, N.O.S.) Contains 3.2 lbs. AZOBRIN Per Gallon

ACTIVE INGREDIENT

Dimethyl phosphate of 3-hydroxy-Nmethyl-cis-crotonamide **INERT INGREDIENTS**

BY WEIGHT 39.1% **60.9%** 100.0%

EPA Reg. No. 201-264

GENERAL DIRECTIONS

TOTAL

AZODRIN Insecticide 3.2 Water Miscible is a water-miscible product which contains 3.2 lbs. of active ingredients per gallon. It is suitable for use in conventional hydraulic ground sprayers, low-pressure knapsack sprayers and in aerial applications. For foliage applications, mix the required amounts of AZODRIN Insecticide 3.2 Water Miscible in no more than 100 gallons of water per acre to provide uniform and thorough coverage. Please refer to the Wildlife Precaution Statements.

DIRECTIONS FOR USE AND APPLICATION

AZODRIN Insecticide 3.2 is for the use on Irish potatoes (White) for the control of Colorado potato beetle, flea beetle, leafhoppers, aphids, mites (Northwestern United States) and potato tuberworm.

For the control of Colorado potato beetle, leafhoppers, use 0.25 to 0.50 lb. active ingredient (10 to 20 fluid ounces AZODRIN Insecticide 3.2) per acre in no more than 100 gallons of water to give uniform coverage. For the control of aphids use 0.5 to 1.0 lbs. actual insecticide (20 to 40 fluid ounces AZODRIN Insecticide 3.2) per acre. For the control of flea beetle use 0.5 lb, actual insecticide (20 fluid ounces AZODRIN Insecticide 3.2) per acre.

For the control of mites (Northwestern United States) use 0.50 to 1.0 lb. active ingredient (20 to 40 fluid ounces AZODRIN Insecticide 3.2) per acre in no more than 100 gallons of water to give uniform coverage. Use the lower dosage of 0.50 lb, active ingredient per acre for light infestations.

For the control of potato tuberworm and heavy infestations of mites use the higher dosage of 1.0 lb. active ingredient per acre. Repeat application as necessary to maintain insect and/or mite control. Do not apply within 7 days of harvest.

WILDLIFE PRECAUTIONS

This product will kill birds and other wildlife. Keep out of any body of water. Use only as directed on this label.

Do NOT spray border areas. Keep border areas within 25 feet of field free of bird feed and shelter. Birds feeding on treated areas may be killed. Do NOT use whenever large flocks of birds are in the vicinity or when they are noted feeding in or around fields. Avoid spray drift, Spray under low pressure. To minimize spray drift, do NOT spray when windy. Keep spray nozzles close to foliage.

WILDLIFE PROTECTION IS EVERYONE'S RESPONSIBILITY

This product is highly toxic to bees exposed to direct treatment or residues on crops. Protective information may be obtained from your Cooperative Agricultural Extension Service.

PRECAUTIONS IN USING

USE PRECAUTIONS

DANGER! Poisonous if swallowed, inhaled or absorbed through skin. Rapidly absorbed through skin. Inhalation or skin contact may, without symptoms, progressively increase susceptibility to AZODRIN Insecticide poisoning.

Do not swallow or get in eyes, or on clothing. Do not breathe vapors.

Keep out of reach of children and domestic animals. Do not contaminate food or feed products.

DANGER-Extremely flammable! Keep away from fire, parks and heated surfaces

Wear clean rubber gloves, water-proof protective on this and goggles or face shield. Replace gloves frequently and destroy used gloves. During commercial or prolonged exposure in spray-mixing and loading operations, wear a mask or respirator of a type passed by the U.S. Bureau of Mines for AZODRIN Insecticide (SD 9129) protection. Wash thoroughly with soap and water after handling and before eating or smoking. If the material gets into the eyes, immediately flush with water for at least ten minutes and get medical attention. In case of contact, remove clothing and wash down with large amounts of water. Decontaminate areas and equipment by washing with a concentrated solution of alkali and detergent and rinse with water.

NOTE: Danger! Avoid stim and eye contamination when handling strong caustic solutions.

DANGER 🛹

DISPOSAL PRECAUTIONS

DECONTAMINATE AND DESTROY USED CONTAINERS. Do not re-use for any purpose. Decontaminate co by washing thoroughly with a strong solution of alkali and detergent and rinsing with water. Destroy contail crushing and burying fragments in an isolated area. Dispose of rinsings in a way so as not to constitute a had contaminate water supplies.

ANTIDOTE AND FIRST AID TREATMENT

ATROPINE IS THE EMERGENCY ANTIDOTE FOR AZODRIN INSECTICIDE POISONING. 2-PAM antidotal and may be used in conjunction with atropine. CALL A PHYSICIAN IN ALL CASES OF SUSP POISONING.

INTERNAL: If the material has been swallowed, induce vomiting immediately. This may be done by introd finger into the throat or by giving warm salt water (1 tablespoon of salt to a glass of water), NEVER GIVE ANY BY MOUTH TO AN UNCONSCIOUS PERSON.

EXTERNAL: If the material has been spilled on the skin, immediately remove patient from the vicinity insecticide, remove all contaminated clothing, and wash skin with soap and running water. If the material gets i eyes, wash immediately with running water for at least ten minutes. If WARNING SYMPTOMS APPEAR (See WA SYMPTOMS below): Keep patient prone and quiet. Start artificial respiration immediately if patient is not breat Transport the patient immediately to the nearest hospital.

NOTE TO PHYSICIAN

WARNING SYMPTOMS: Symptoms include weakness, headache, tightness in chest, blurred vision, nonpin-point pupils, salivation, sweating, nausea, vomiting, diarrhea, and abdominal cramps.

TREATMENT: Atropine is the specific therapeutic antagonist of choice against parasympathetic nervous stimul there are signs of parasympathetic stimulation, atropine sulfate should be injected at 10-minute intervals, in doses of milligrams, until complete atropinization has occurred.

Paralidoxime chloride (2-PAM chloride) may also be used as an effective antidote in addition to and while mai full atropinization. In adults, an initial dose of 1 gram of 2-PAM should be injected, preferably as an infusion in 2 saline over a 15 to 30-minute period. If this is not practical, 2-PAM may be administered slowly by intravenous inje a 5 percent solution in water over a period of not less than two minutes. After about an hour, a second dose of 1 2-PAM will be indicated if muscle weakness has not been relieved. For infants and children, the dose of 2-PAM grams.

Morphine is contraindicated.

Clear chest by postural drainage. Oxygen administration may be necessary. Observe patient continuously for 4 Rephated exposure to cholinesterase inhibitors may, without warning, cause prolonged susceptibility to very small any cholinesterase inhibitor. Allow no further exposure until cholinesterase regeneration has been attained as det by blood test.

DECONTAMINATE AND DESTROY USED CONTAINERS. Do not re-use for any purpose. Decontaminate containers by washing thoroughly with a strong solution of alkali and detergent and rinsing with water. Destroy containers by crushing and burying fragments in an isolated area. Dispose of rinsings in a way so as not to constitute a hazard, or contaminate water supplies.

ANTIDOTE AND FIRST AID TREATMENT

ATROPINE IS THE EMERGENCY ANTIDOTE FOR AZODRIN INSECTICIDE POISONING. 2-PAM is also antidotal and may be used in conjunction with atropine. CALL A PHYSICIAN IN ALL CASES OF SUSPECTED POISONING.

INTERNAL: If the material has been swallowed, induce vomiting immediately. This may be done by introducing a firmer into the throat or by giving warm salt water (1 tablespoon of salt to a glass of water). NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON.

EXTERNAL: If the material has been spilled on the skin, immediately remove patient from the vicinity of the insecticide, remove all contaminated clothing, and wash skin with soap and running water. If the material gets into the eyes, wash immediately with running water for at least ten minutes. If WARNING SYMPTOMS APPEAR (See WARNING SYMPTOMS below): Keep patient prone and quiet. Start artificial respiration immediately if patient is not breathing. Transport the patient immediately to the nearest hospital.

WARNING SYMPTOMS: Symptoms include weakness, headache, tightness in chest, blurred vision, non-reactive pin-point pupils, salivation, sweating, nausea, vomiting, diarrhea, and abdominal cramps.

TREATMENT: Atropine is the specific therapeutic antagonist of choice against parasympathetic nervous stimulation. If there are signs of parasympathetic stimulation, atropine sulfate should be injected at 10-minute intervals, in doses of 1 to 2 milligrams, until complete atropinization has occurred.

Paralidoxime chloride (2-PAM chloride) may also be used as an effective antidote in addition to and while maintaining full atropinization. In adults, an initial dose of 1 gram of 2-PAM should be injected, preferably as an infusion in 250 cc of saline over a 15 to 30-minute period. If this is not practical, 2-PAM may be administered slowly by intravenous injection as a 5 percent solution in water over a period of not less than two minutes. After about an hour, a second dose of 1 gram of 2-PAM will be indicated if muscle weakness has not been relieved. For infants and children, the dose of 2-PAM is 0.25 grams.

Morphine is contraindicated.

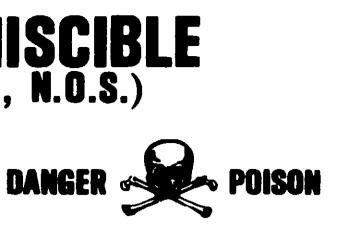

Clear chest by postural drainage. Oxygen administration may be necessary. Observe patient continuously for 48 hours. Repeated exposure to cholinesterase inhibitors may, without warning, cause prolonged susceptibility to very small doses of any cholinesterase inhibitor. Allow no further exposure until cholinesterase regeneration has been attained as determined by blood test.
