

Dichlorvos Horse Wormer is recommended for the removal and control of horse bots (*Gastrophilus intestinalis* and *G. nasalis*), large bloodworms (*Strongylus vulgaris*, *S. equinus*, *S. edentatus*), small bloodworms (of the genera *Cyathostomum*, *Cylicocercus*, *Cylicocylus*, *Cylicodontophorus*, *Tricodontophorus*, *Poteriosomum*, *Gyaloccephalus*), pinworms (*Oxyuris equi*), and large roundworms (*Parascaris equorum*) in horses other than foals (sucklings and young weanlings).

ACTIVE INGREDIENT

Dichlorvos* (2,2-dichlorovinyl dimethyl phosphate) 17.5%

INERT INGREDIENTS 82.5%

TOTAL 100.0%

E.P.A. Reg. No. 201-335 AA

STORE IN A COOL PLACE (less than 80°F)

USE DIRECTIONS. Prior to treatment, be sure your horse has parasites (worms). For satisfactory diagnosis, a microscopic fecal examination should be performed by a veterinarian or diagnostic laboratory prior to worming.

Dichlorvos Horse Wormer is designed to be given to individual horses in 1/2 the grain portion of the ration at a single feeding. The wormer should be mixed into the grain just prior to administration. The remainder of the grain may be fed after the consumption of the medication. Do not change grain, but add the wormer to the grain that the horse is accustomed to eating. Due to known variability of grain consumption in sucklings and young weanlings, Dichlorvos Horse Wormer is not recommended for them. Fasting prior to dosing is not necessary or recommended. To insure maximum effectiveness, withhold all water for 4 hours before and for 8 hours after consumption of the feed cube.

The weight of each animal must be determined and the correct dosage administered. The number of packages to be administered and the number of treatments can be determined from the following table.

BODY WEIGHT (lbs)	NO. OF PACKAGES
200-300	1
301-600	2
601-900	3
901-1200	4
1201-1500	5

USE PRECAUTIONS. Do not administer Dichlorvos Horse Wormer to horses afflicted with fevers or suffering from colic. Do not use on pregnant mares or on nursing foals. Do not use on horses with known or suspected liver disease. Horses which have recently received any other anthelmintic should be kept at least 10 days before being treated with Dichlorvos Horse Wormer. Do not use Dichlorvos Horse Wormer in conjunction with any other anthelmintic within a 14-day period of the administration of the product. If other worming treatments are required, they should not be repeated for 14 days after the treatment with Dichlorvos Horse Wormer.

WARNING. Do not use with animals fed containing this preparation. Do not administer to pregnant mares or nursing foals. Do not use with animals fed containing this preparation. Do not store in feed troughs or feed containers. Do not use in feed troughs or feed containers. Do not use in feed troughs or feed containers. Do not use in feed troughs or feed containers.

ATTENTION. Do not use with animals fed containing this preparation. Do not administer to pregnant mares or nursing foals. Do not use with animals fed containing this preparation. Do not store in feed troughs or feed containers. Do not use in feed troughs or feed containers. Do not use in feed troughs or feed containers.
