- 4 Do not apply to centipedegrass during the period of winter dormancy. Grass should be green and actively growing at the time of application.

Weeds Controlled or Suppressed

Generally, application rates at the lower end of the rate range will be satisfactory for young, succulent growth of sensitive weed species. For less sensitive species and under conditions where control is more difficult (plant stress conditions such as drought or extreme temperatures, dense weed stands and/or larger weeds), the higher rate within the rate range or repeat applications will be needed. Weeds growing in the absence of competition from other vegetation generally require higher rates or repeat applications to obtain satisfactory control or suppression.

How to Apply

To optimize product performance mow the lawn two to three days before applying [TURF Fertilizer Plus Penoxsulam Weed Control or this product]. If the lawn is under moisture stress, a thorough sprinkler irrigation of at least 1/2 inch may be needed at least one to two days before application. For optimal results, apply [TURF Fertilizer Plus Penoxsulam Weed Control or this

product] in the morning when dew is present. If necessary irrigate with less than 1/4 inch of water just prior to application to maximize particle adherence to leaf surfaces. Avoid watering of treated area for 24 hours following application. Avoid making applications if rainfall is expected within 24 hours after treatment.

[Determining Your Lawn's Square Footage]

To determine how much of this product to apply, you must determine the square footage of your lawn. An easy way to do this is to walk the length of your lawn, figuring that one pace equals about 3 feet. Do the same with the width of the lawn. Then multiply the length by the width to arrive at the total. Make sure you subtract the square footage of your home and driveway when calculating the total square footage of your lawn. If your lawn has an irregular shape, try dividing it up into a number of square areas. Calculate the square footage for each area, then add the figures together to reach your total lawn size.]

[above pictogram is optional]
[Spreader Tips

The two main types of spreaders are the Drop Spreader, which drops the material straight down the width of the spreader as you push, and the Broadcast Spreader (also known as a rotary), which throws the material from the spreader]

[Drop Spreader [(See Fig A)]First make two passes along the top of the area you'll be covering Then make two passes along the bottom area Then move back and forth along the long part of the lawn On each pass, as you reach the strips at the top and bottom of the area to be covered, shut off the spreader It's also important to shut off the spreader when you are stopped]

How Much to Apply

Apply [TURF Fertilizer Plus Penoxsulam Weed Control or this product] to established lawns Possible re-treatment in 30 days may be necessary if the lawn is heavily overrun with weeds or if adverse low moisture conditions prevail and weeds are in a state of poor growth Do not exceed specified rates because damage to the lawn may occur Do not make more than two applications per season

Note When applying to warm season turfgrass under conditions of inadequate moisture, high temperature and high humidity, over-application may cause minor temporary discoloration It is recommended to reduce application rates by 50% during hot, dry conditions to avoid possible dehydration or browning of turfgrass

When to Apply

Best weed control results are obtained when [TURF Fertilizer Plus Penoxsulam Weed Control or this product] is applied to small, actively growing weeds in the spring or early fall Extreme growing conditions such as drought or near freezing temperatures prior to, at, or following time of application may reduce weed control
