USEAGE WARNINGS

WARNING: Keep out of reach of children. May be fatal if swallowed. This solution if brought into contact with skin can cause toxic symptoms, wash with soap and water. Avoid inhalation and skin contact. Avoid contamination of feed and foodstuffs. Keep out of reach of children. Do not use on humans or household pets.

DO NOT USE, POUR, SPILL OR STORE NEAR HEAT OR OPEN FLAME.

This product is toxic to fish and wildlife. Birds feeding on treated areas may be killed. Keep out of lakes, ponds and streams. Do not apply to any area not specified on the label.

Rinse equipment and container and dispose of wastes by burying in non-crop lands away from water supplies. Container should be disposed of by punching holes in them and burying with wastes or by burning (keep out of smoke). Do not contaminate water by cleaning of equipment, or disposal of waste.

USE AND APPLICATION DIRECTIONS

TERMITE CONTROL: To control termites dilute the required amounts of TASC0 BRAND 8 lb. Chlordane Emulsion with sufficient water to provide a mixture containing 1.0% by weight Chlordane (one part of this emulsion with 96 parts water or approximately 1 pt. per 12 gallons of water) and apply at the following rates:

(A) BUILDING WITH CRAWL SPACES

(1) Apply 2 gallons per 5 linear feet to critical areas only under the house, such as along the inside of foundation walls, around piers, sewer pipes, conduits, etc. Trench according to directions in part (2) below.

(2) Along the outside of foundation walls, dig a narrow trench, with a band no wider than six inches, such trench to be dug no deeper than the top of the footings. If the trench is less than 15 inches in depth to the top of the footings, apply 1 gallon per 5 linear feet. Replace the soil and apply another 1 gallon per 5 linear feet to the back fill. Cover the back fill with a thin layer of soil. If the trench is more than 15 inches in depth to the top of the footings, apply 2 gallons per 5 linear feet. Replace the soil and apply another 2 gallons per 5 linear feet to the back fill. Cover the back fill with a thin layer of soil. A trench 30 inches deep is a maximum depth required alongside these foundations where the top of the footings is greater than 30 inches deep. In lieu of trenching to a 30" depth, make the trench 12 to 15" deep and red to footing, spacing the holes about 1 ft. apart.

(3) Apply 1 gallon per 10 square feet of soil surface under attached porches, entrance platforms, utility entrances, and similar situations where slab or fill is at the grade level. Where crawl spaces exist, treat as described in part (1).
