CAUTION: Keep out of reach of children.

DIRECTIONS

For Aid in Control of
Horn Fly and Lice on Cattle

SELF APPLICATION - DUST BAG

Place the contents of this package (12 1/2 lbs.) in the dust bag supplied with this container. Use one (1) dust bag for each 10 to 15 head of cattle. Hang these bags in a line or group them in areas which the cattle frequent, such as shade trees or gates and lanes used as pathways to watering or feeding areas. Bags should be hung at least 24 inches apart and so that the bottom of the bag is about 30 inches from the ground. The recommended dosage is one bag

(12 1/2 lbs.) for each 10 to 15 head of cattle over a 4 week period. Do not put bags out more often than every 4 weeks. In case the recommended amount of dust is not used in the 4 week period relocate bags to an area more accessible to the cattle.

HAND APPLICATION

Beef Cattle Dust may be applied to beef animals by sprinkling the dust over the animals, or by using a suitable mechanical dust applicator. Animals should be thoroughly dusted once every 4 weeks, as needed, for horn fly and lice control. Do not use more than one pound of dust per animal per treatment. Persons treating animals should avoid inhalation of dust. This method will only aid in control of horn fly and lice on cattle.

CAUTION: Harmful if swallowed. Avoid breathing dust. Avoid contamination of feed and food-stuffs.

This product is poisonous to fish. Keep out of lakes, streams, and ponds. Apply this product only as specified on this label.

Do not use this product on dairy animals, in dairy barns or on feed or forage crops to be fed to dairy animals, or other animals being finished for slaughter. Do not use on crops or animals other than specified on this label.
