

DIRECTIONS FOR USE

ALFALFA — CLOVER

For control of alfalfa weevil, clover leaf weevil, spittlebug, leafhopper and aphid.

FIRST CUTTING: For ground equipment apply 2-3 quarts Double M Insecticide in 10 to 20 gallons water to cover 1 acre. Make application as soon as weevil damage (when tips are beginning to show feeding) appears in the field. Early application is desired to control the weevil when they are small. For spittlebug control make application within 1 week after eggs begin to hatch. Do not apply within 7 days of harvest. Do not apply after full bloom or if necessary only when bees and other pollinators are not visiting plants. Very toxic to bees.

For aircraft application use 2-3 quarts Double M Insecticide in 3-10 gallons water per acre using higher dosage and spray volume on heavy growth, follow same timing of application and precautions as for ground equipment.

STUBBLE SPRAYING. In areas where weevil appears at cutting time remove the first cutting and apply 2-3 quarts Double M Insecticide in sufficient water

Riverdale DOUBLE M INSECTICIDE ALFALFA SPRAY

Contains 2 lbs. Technical Methoxychlor and 2 lbs. Malathion Per Gallon

ACTIVE INGREDIENTS:

Technical Methoxychlor*	23.787
Malathion (0,0-dimethyl dithiophosphate of diethyl mercaptosuccinate)	23.807
Xylene	43.510

INERT INGREDIENTS

8.896

TOTAL

100.000

*23.787 lbs. Methoxychlor, Technical is equivalent to 20.814 lbs. 2,2-bis (p-methoxyphenyl)-1,1,1-trichloroethane and 2.973 lbs. other inert ingredients and reaction products.

WARNING: KEEP OUT OF REACH OF CHILDREN
