MUSHROOM FLY DUST

for

MUSHROOM FLIES

DIRECTIONS FOR USE

MSCo No. 225M Mushroom Fly Dust is for general dusting for control of small and large mushroom flies.

Use a good duster, preferably the electric mushroom duster, and this dust will remain suspended in the air for a long period of time, thus insuring better kill.

It is important that houses be dusted as soon soon as flies appear.

Houses should be as dry as possible, the doors closed, and the air temperature up to 70 F. for at least three hours previous to dusting, in order to get best results.

Use 2-1 2 ounces of MScO No. 225M Mushroom Fly Dust for each 1000 cu. ft. of air space. To obtain cubic contents of house, multiply length by width by average height.

See that dust is distributed evenly throughout the house. Leave closed as long as possible.

Dust two or three times each week during the growing season.

In the event of severe infestation, dust every other day for two weeks.

This product contains Malathion, which when used on mushrooms requires a one day pre harvest interval.

CAUTION

KEEP OUT OF REACH OF CHILDREN

Use a good duster, preferably the electric mushroom duster, and this dust will remain suspended in the air for a long period of time, thus insuring better kill.
