DIRECTIONS

SNAILS, SLUGS, CUTWORMS around Ornamental Flowering
Plants. The preferred method of treating with BUG-GETA is to
spray thoroughly around the base of the plants. For liquid use:
Apply 1 gallon of BUG-GETA to 1 acre or more. For the solid:
Apply 4 pounds of BUG-GETA to 1 acre or more, or
to the ground around the base of the plants. Apply when
there is no danger of heavy rains. Apply the liquid on
warm, sunny days, or on cold days when there is no
danger of heavy rains. Apply the solid directly to
the soil around the base of the plants, mixed with
water and applied as described under the liquid use.

CAMELLIAS, AZALEAS, RHODODENDRONS AND OTHER PLANTS:

Brachyrhinus Weevils. Strawberry Root Weevils. 1 to 2
inches, white, larval form. Apply 4 pounds of BUG-GETA to
the soil around the base of each plant, mixed with
water and applied as described under the liquid use.

GREENHOUSES AND LATH HOUSES: Time to apply: 1 to
3 weeks after planting. The liquid use is preferred. For the
solid: Spread a layer 1/2 inch thick of BUG-GETA around
the base of each plant, mixed with water and applied
as described under the liquid use.

NOTICE: Do not use around pets or children. Keep
out of reach of children.
