DO NOT GET ON SKIN

1. The first step in the process of identifying a problem is to determine the nature of the problem. This involves gathering information about the problem and its context. The next step is to identify the causes of the problem. This involves analyzing the information gathered in the first step and identifying the factors that are contributing to the problem. The third step is to develop a plan of action. This involves determining the steps that need to be taken to address the problem. The fourth step is to implement the plan. This involves carrying out the steps that were developed in the third step. The final step is to evaluate the results. This involves determining whether the problem has been solved and whether the plan of action was effective.

BEEF CATTLE, SHEEP, GOATS, HOGS, HORSES Spray or Dip—Permethrin and Sarcoplic Manges (Scab or Stables)—1½ lbs. per 100 gals. water. For ticks and lice, apply 2 sprays one week apart.
