ORTHO Chinch Bug Spray

READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH LABEL DANGER STATEMENTS AND DIRECTIONS.

KEEP PESTICIDE IN ORIGINAL CONTAINER. DO NOT PUT CONCENTRATE OR DILUTE INTO FOOD OR DRINK CONTAINERS.

ORTHO Chinch Bug Spray containing ASPON is designed for the control of Chinch Bugs and Sod Webworms that infest lawns. It mixes readily with water and may be applied with an ORTHO Lawn Sprayer or tank type sprayer. Do not store diluted spray.

DIRECTIONS

LAWN CHINCH BUGS: Chinch Bugs suck the juices from the base of grass blades causing the grass to wilt, turn brown and eventually die. Chinch Bugs are small, ranging in size from 1/20" to 1/5". Adult Chinch Bugs are black with white marks on their wings. To verify the presence of Chinch Bugs in a lawn, drive a coffee can from which both ends have been removed into the lawn at the edge of a damaged area and fill it with water. If Chinch Bugs are present, they will float to the surface.

If Chinch Bugs are present, treat the entire lawn as directed in the DILUTION TABLE. Spray again as soon as Chinch Bug damage is noticed. One application will remain effective up to 8 weeks. If present, Sod Webworms will also be controlled.

SOD WEBWORMS (Crambus sp.): Sod Webworms are light brown caterpillars, 1/4 to 3/4 inch long, that hide in the grass during the day and feed on the grass blades at night. Adult Webworms, usually referred to as Lawn Moths (about one inch in length with long snout), emerge from the grass at dusk. They fly over the lawn laying eggs that later hatch into destructive caterpillars. Damage appears first as small brown spots which, if not treated, may rapidly develop into large brown areas of severely damaged or dead grass. If Lawn Moths (Sod Webworm Adults) are noticed in large numbers at dusk, or at first sign of damage to lawn, treat entire lawn evenly as directed in DILUTION TABLE. Repeat in 8 weeks or as necessary.
