ORTHO[®] Methoxychlor 75-3 Seed Protectant is a special formulation containing ORTHOCIDE (Captan) and Methoxychlor for seed treatment application. ORTHOCIDE Methoxychlor 75-3 Seed Protectant now contains a binder which helps to adhere the treat to the seed so that there is minimum loss during processing and planting. Has no adverse effect on seed germination or planting rate. It is used in preventing seed rot and damp-off diseases on germinating seeds and seedlings and smut on onion and hulled sorghum seeds. It also reduces losses from Cadelle, Rice Weevil, Confused Flour Beetle, Angoumois Grain Moth and Indian Meal Moth during preplanting storage of clean seed.

USE ISOTOX SEED TREATER (75) in combination with ORTHOCIDE Methoxychlor 75-3 Seed Protectant when treating seed to be planted in soil infested with seed corn maggot and wireworms.

DIRECTIONS: Apply as a slurry treatment. The recommended amount of product should be mixed with the required amount of water for the slurry treater machine to be used. Do not allow slurry mixtures to stand overnight in the machine. Clean out equipment thoroughly between treating operations.

GLADIOLUS CORMS: For Prevention of Bulb Rot. Use 1 1/2 oz in 1 gal. water (1 lb. to 10 gals.). Soak bulbs in mixture 20 to 30 minutes.
