**SCEPTER**®  
herbicide

# Supplemental Labeling

REC'D...  
97 MAR 13 P2:48

EPA Reg. No. 241-289

## FOR USE IN SOYBEANS

### TANK-MIXTURE APPLICATIONS OF SCEPTER AND SULFENTRAZONE-CONTAINING PRODUCTS FOR PREPLANT OR PREEMERGENCE WEED CONTROL IN SOYBEANS

OBSERVE ALL PRECAUTIONARY STATEMENTS IN THE SCEPTER LEAFLET LABEL BEFORE USING. SEE THE SCEPTER LEAFLET LABEL FOR PRECAUTIONS, WORKER PROTECTION STANDARD REQUIREMENTS, APPLICATION INFORMATION, WEEDS CONTROLLED, USES WITH OTHER PRODUCTS AND ROTATIONAL CROP RESTRICTIONS.

#### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. The use of SCEPTER herbicide not consistent with this labeling may result in injury to crops. DO NOT apply this product through any type of irrigation system.

This label must be in the possession of the user at the time of herbicide application.

#### GENERAL INFORMATION

SCEPTER provides control of broadleaf and grass weeds when applied preplant, preemergence and postemergence. SCEPTER can be applied to either conventional or no-till soybeans. Sulfentrazone-containing products (such as Authority<sup>1</sup> Broadleaf or Canopy<sup>2</sup> XL) may be tank-mixed with SCEPTER when applied early preplant, preplant incorporated or preemergence only for enhanced control of weeds common to soybean production.

SCEPTER may be applied postemergence to soybeans previously treated with sulfentrazone-containing products. For sequential treatments, a sufficient time period should occur between treatments to allow an appropriate assessment of weed control needs.

**When tank-mixing herbicides, always follow the most restrictive label.**

Use of SCEPTER herbicide in accordance with label directions is expected to result in normal growth of rotational crops in most situations; however, various environmental and agronomic factors make it impossible to eliminate all risks associated with the use of this product and, therefore, rotational crop injury is always possible.
