APR 9 1998

Desire L. Little
American Cyanamid Company
P.O. Box 400
Princeton, NJ 08543-0400

Dear Ms. Little:

Subject: Revised Labeling
Chopper Herbicide
EPA Registration No 241-296
Your Submission Dated March 24, 1998

The amendment referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended is acceptable provided that you:

1. Make the labeling changes listed below before you release the product for shipment bearing the amended labeling:

- The heading "Additional Uses Except California:" is misleading since "site preparation in forestry sites" is listed earlier as a heading. We suggest you use text similar to the following:

Chopper herbicide is also recommended for control of undesirable vegetation along forest roads, non-irrigation ditchbanks, and the establishment and maintenance of wildlife openings except in the State of California.

2. Submit one (1) copy of your final printed labeling before you release the product for shipment.

2 7 17

A stamped copy of the labeling is enclosed for your records.

Sincerely yours,

James A. Tompkins
Product Manager (25)
Herbicide Branch
Registration Division (7505C).

Enclosure

3 7 17

CHOPPER® herbicide

ACTIVE INGREDIENT:

Isopropylamine salt of Imazapyr (2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-3-pyridinecarboxylic acid)* 27.6%

INERT INGREDIENTS 72.4%

TOTAL 100.0%

*Equivalent to 22.6% (2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-3-pyridinecarboxylic acid) or 2 pounds acid per gallon.

EPA Reg. No. 241-296

U.S. Patent No. 4,798,619

EPA Est. No.

KEEP OUT OF REACH OF CHILDREN

CAUTION/PRECAUCION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

STATEMENT OF PRACTICAL TREATMENT

IF ON SKIN: Wash with plenty of soap and water. Get medical attention

IF IN EYES: Flush with plenty of water. Get medical attention if irritation persists.

IF INHALED: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention.

See Next Page for Additional Precautions

In case of an emergency endangering life or property involving this product, call collect, day or night, Area Code 973-683-3100;

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS

CAUTION!

Harmful if inhaled or absorbed through skin. Avoid breathing spray mist. Avoid contact with skin, eyes or clothing. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.

Personal Protective Equipment (PPE):

Applicators and other handlers must wear:

- long-sleeved shirt and long pants
- waterproof gloves
- shoes plus socks

Follow manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:

1. Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
2. Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

PHYSICAL AND CHEMICAL HAZARDS

Spray solutions of CHOPPER should be mixed, stored, and applied only in stainless steel, fiberglass, plastic, and plastic-lined steel containers.

DO NOT mix, store, or apply CHOPPER or spray solutions of CHOPPER in unlined steel (except stainless steel) containers or spray tanks.

ENVIRONMENTAL HAZARDS

DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. DO NOT contaminate water when disposing of equipment washwaters. This herbicide is phytotoxic at extremely low concentrations. Non-target plants may be adversely affected from drift.

5 7 17

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- coveralls
- waterproof gloves
- shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Noncrop weed control is not within the scope of the Worker Protection Standard. See the GENERAL INFORMATION section of this label for a description of noncrop sites.

Do not enter treated areas without protective clothing until sprays have dried.

CHOPPER herbicide should be used only in accordance with recommendations in this leaflet label. Keep containers closed to avoid spills and contamination.

6 9 17

STORAGE AND DISPOSAL

- PROHIBITIONS:** DO NOT store below 10°F. DO NOT contaminate water, food, or feed by storage or disposal.
- PESTICIDE DISPOSAL:** Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.
- CONTAINER DISPOSAL:** Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in an approved sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

IMPORTANT

DO NOT use on food or feed crops. **DO NOT** apply to the inside of ditches used to transport irrigation water. **DO NOT** apply where runoff water may flow onto agricultural land as injury to crops may result. Keep from contact with fertilizers, insecticides, fungicides, and seeds. **DO NOT** apply or drain or flush equipment on or near desirable non-conifer trees or other plants, or on areas where their roots may extend, or in locations where the chemical may be washed or moved into contact with their roots.

Thoroughly clean application equipment after use. Flush tank, pump, hoses, and boom with several changes of water after removing nozzle tips and screens (clean these parts separately).

GENERAL INFORMATION

CHOPPER herbicide is an emulsifiable concentrate mixable with water, diesel oil, or recommended seed oils and penetrating oils. For foliar applications, CHOPPER may be mixed with water as the spray carrier or an emulsion carrier may be prepared by mixing CHOPPER into water and then adding a suitable seed oil at 12 to 50%, by volume. CHOPPER is to be mixed with water or a penetrating oil and applied as a spray to cut stumps and frilling cuts for the control of brush. CHOPPER should be mixed with a penetrating oil for application to the basal area of brush and trees. Adequate agitation should be maintained with all CHOPPER emulsion mixtures to prevent phase separation. Prior to actual tank mixing with other products, herbicides and carrier oils, compatibility testing in small containers is recommended!

CHOPPER is recommended for woody vegetation control and site preparation in forestry sites.

An application of CHOPPER is recommended for control of brush in noncropland areas such as railroad, utility, highway, and pipeline rights-of-way, utility plant sites, petroleum tank farms, pumping installations, fence rows, storage areas, non-irrigation ditchbanks and other similar areas. CHOPPER herbicide is also recommended for use with asphalt and asphalt slurries to control weeds on road shoulders, under pavement, in roadside cracks and crevices, and to prevent weed encroachment on highways and paved surfaces.

ADDITIONAL USES EXCEPT IN CALIFORNIA:

CHOPPER herbicide is also recommended for control of undesirable vegetation along forest roads, non-irrigation ditchbanks, and the establishment and maintenance of wildlife openings.

was for clean?

SYMPTOMOLOGY:

CHOPPER herbicide is readily absorbed through foliage, bark and roots and is translocated rapidly throughout the plant, with accumulation in meristematic regions. Treated plants stop growing soon after herbicide application. Chlorosis first appears in the youngest leaf tissue. In perennials, the herbicide is translocated into the roots, thus preventing resprouting. Chlorosis and tissue necrosis may not be apparent in some species for several weeks after application. Woody plants, brush, and trees may not display the full extent of herbicide control until several months following application.

SITE PREPARATION TREATMENTS

CHOPPER herbicide may be used to control labeled grasses, broadleaf weeds, vines and brambles, and woody brush and trees on forest sites in advance of regeneration for the following conifer crop species:

<u>Crop Species</u>	<u>Rate (oz/A)</u>
Loblolly Pine (<u>Pinus taeda</u>)	48-80
Loblolly X Pitch Hybrid	48-80
Longleaf Pine (<u>Pinus palustris</u>)	48-80
Shortleaf Pine (<u>Pinus echinata</u>)	48-80
Virginia Pine (<u>Pinus virginiana</u>)	48-80
Slash Pine (<u>Pinus elliottii</u>)	40-64
Black Spruce (<u>Pinus mariana</u>)	24-32
Jack Pine (<u>Pinus banksiana</u>)	24-32
Pitch Pine (<u>Pinus rigida</u>)	24-32
Red Spruce (<u>Picea rubens</u>)	24-32
White Pine (<u>Pinus strobus</u>)	24-32
White Spruce (<u>Picea glauca</u>)	24-32
Douglas-Fir (<u>Pseudotsuga menziesii</u>)	24-32
Lodgepole Pine (<u>Pinus contorta</u>)	24-32
Ponderosa Pine (<u>Pinus ponderosa</u>)	24-32

Use the recommended rate of CHOPPER per acre applied as a broadcast foliar spray for long-term control of labeled woody plants and residual control of herbaceous weeds. Within 4 to 6 weeks of treatment, grasses and other herbaceous weeds will be controlled and may provide fuel to facilitate a site preparation burn, if desired, to control conifers or other species tolerant to the herbicide.

MIXING and APPLICATION INSTRUCTIONS for SITE PREPARATION

Apply the recommended rate of CHOPPER herbicide per acre (2.25 gallons will treat six acres at the 48 oz./A rate) in 5 to 20 gallons total spray carrier for helicopter applications or 5 to 40

gallons total spray carrier for mechanical or backpack ground spray applications. Enhanced brownout for burning and improved control of brush and grasses may be obtained by application of CHOPPER herbicide in 12 to 50% oil:water (volume:volume) emulsion carrier. Mix CHOPPER herbicide into the water portion of the carrier thoroughly, then add the oil and mix thoroughly again to obtain a uniform emulsion. Use the higher label rates of CHOPPER herbicide and higher spray volumes when controlling particularly dense or multi-layered canopies of hardwood stands, or difficult to control species. Make applications during the growing season; beginning in the spring after full leaf expansion of the target weed or brush has occurred and complete applications before leaf drop in the fall.

Tank mixes may be necessary for chemical control of conifers and other species tolerant to CHOPPER herbicide in certain cases. Observe all precautions and restrictions on the product labels. Always follow the most restrictive label. Combinations with other products labeled for forest site preparation may kill certain plants such as legumes and blackberry which are desirable for wildlife habitat.

Do not plant seedlings of northern or western conifer species, other than Douglas-fir, on sites that have been site prepared with a broadcast application of CHOPPER herbicide or into the treated zone of spot or banded site preparation applications for three months following treatment or injury may occur. Douglas-fir seedlings may be planted two months after site preparation treatment with CHOPPER herbicide.

HELICOPTER SPRAY EQUIPMENT:

All precautions should be taken to minimize or eliminate spray drift. Applications should not be made under gusty conditions. The use of controlled droplet booms and nozzle configurations is recommended.

IMPORTANT: DO NOT make applications by fixed wing aircraft. Maintain adequate buffer zones. Thoroughly clean application and mixing equipment, including landing gear, immediately after use. Prolonged exposure of this product to uncoated steel (except stainless steel) surfaces may result in corrosion and failure of the exposed part.

DIRECTED FOLIAR APPLICATIONS for CONIFER RELEASE

CHOPPER herbicide may be applied as a directed spray using water or oil emulsion carrier for control and suppression of labeled brush and weed species. Directed spray applications may be made using low carrier volumes (10 gallons total spray per acre or less) in conifer stands of all species and ages by targeting the unwanted vegetation and avoiding direct application to the conifer.

For applications directed to the foliage of undesirable brush mix 2 to 3% CHOPPER in water. For brush species with thick leaf cuticles or difficult to control species use oil emulsion carrier containing 12 to 50%, by volume, recommended oil diluent. Apply the spray solution or emulsion to at least two-thirds of each hardwood crown using backpack sprayers or hand held equipment. Do not spray to the point of runoff and avoid spraying the conifers for best results. Big leaf maple requires a 10% by volume, CHOPPER solution or emulsion.

Some minor conifer growth inhibition may be observed when release treatments are made during periods of active conifer growth. To minimize potential conifer height growth inhibition, release treatments may be made late in the growing season after formation of final conifer resting buds. To prevent possibility of conifer injury, do not apply CHOPPER herbicide when conifers are under stress from drought, diseases, animal or winter injury, or other stresses reducing conifer vigor.

Injury may occur to non-target or desirable hardwoods if they extend from the same root system as treated stems, or their root systems are grafted to those of the treated tree, or if their roots extend into the soil near treated trees.

UNDERSTORY BROADCAST APPLICATIONS for MID-ROTATION RELEASE

CHOPPER may be applied as a broadcast application below the pine canopy in southern pines to control understory brush and suppress trees for labeled species. Ground spray machinery or hand held equipment may be used to broadcast CHOPPER in water or oil emulsion carrier below the crop tree canopy in a manner as to minimize spray contact by the live crown of crop trees.

Ensure that maximum labeled rates per acre listed for crop species below are not exceeded.

Crop Species	Maximum Rate (fl. oz./Acre)
Loblolly Pine (<u>Pinus taeda</u>)	64
Loblolly X Pitch Hybrid	64
Virginia Pine (<u>Pinus virginiana</u>)	64
Longleaf Pine (<u>Pinus palustris</u>)	32
Pitch Pine (<u>Pinus rigida</u>)	32
Shortleaf Pine (<u>Pinus echinata</u>)	32
Slash Pine (<u>Pinus elliottii</u>)	32

CUT STUMP TREATMENTS

Mix 8.0-16.0 fluid ounces of CHOPPER in one gallon of water*, diesel oil, or a penetrating oil. CHOPPER herbicide may be tank-mixed with Garlon[®] 3A, Garlon 4, Tordon[®] K, Brush Killer[®] 800, Escort[®] or Roundup[®] to control labeled species. Spray or brush the CHOPPER solution onto the cambium area of the freshly cut stump surface. Insure that the CHOPPER solution thoroughly wets the cambium area (the wood next to the bark) of the stump. The use of a surfactant or penetrating agent may improve uptake through partially callused cambiums. Applications can be made anytime during the year except during periods of heavy sap flow in the spring. **DO NOT** over apply causing puddling.

TREE INJECTION TREATMENTS

No Worker Protection Standard worker entry restrictions or worker notification requirements apply when this product is directly injected into agricultural plants.

Mix 8.0-12.0 fluid ounces of CHOPPER in one gallon of water*. Using standard injection equipment, apply 1 ml. of CHOPPER solution at each injection site around the tree with no more than 1 inch intervals between cut edges. Insure that the injector completely penetrates the bark at each site.

FRILL OR GIRDLE TREATMENTS

Mix 8.0-12.0 fluid ounces of CHOPPER in one gallon of water*, diesel oil, or a penetrating oil.

Using a hatchet, machete, or similar tool, make cuts through the bark and completely around the tree with no more than 2 inch intervals between cut edges. Spray or brush the CHOPPER solution into each cut until thoroughly wet.

*Note: Use water as a diluent only when temperatures are sufficient to prevent freezing or add antifreeze (ethylene glycol) according to label directions to prevent freezing.

CUT STUBBLE

CHOPPER herbicide can be applied within 2 weeks following mechanical mowing or cutting of brush. Best results are obtained when some regrowth of brush has occurred. To suppress or control resprouting, uniformly apply a spray solution of 1 to 2 pints CHOPPER herbicide plus 2.5 gallons (5% v/v) basal oil, or similar penetrating agent plus enough water to make 50 gallons of spray solution to treat one acre. CHOPPER herbicide may be tank-mixed with 1 to 2 quarts of Garlon 4 or Tordon K and other labeled products to aid in control or suppression of brush. When tank-mixing, follow all precautions on the tank-mix product label and always follow the most restrictive label. Tank-mixes should include at least 5% (v/v) penetrating agent. The addition of at least 5% (v/v) penetrating agent can aid in uptake through the bark or exposed roots. Cut stubble applications are made to the soil and cut brush stumps. This type of application may increase ground cover injury. However, vegetation will recover. Making applications of CHOPPER herbicide directly to the soil can increase potential root uptake causing injury or death of desirable trees.

USE WITH ASPHALT AND PAVED SURFACES

CHOPPER herbicide may be applied at 3 quarts per acre in combination with MC 30, MC 70, RC 70, and SC 70 asphalts to control weeds which encroach on road shoulders under guardrails, or in cracks and crevices of paved surfaces. The addition of an emulsifier may be needed to allow proper mixing of CHOPPER with other asphalts. Add CHOPPER to the distribution tank just before application, allowing sufficient time for it to mix uniformly with the asphalt. Mixtures should not be heated above 150° F. Do not allow mixture to stand; apply as soon as thoroughly mixed.

THINLINE BASAL AND STEM APPLICATIONS

CHOPPER herbicide may be applied as a thinline application to susceptible species such as big leaf maple (Acer macrophyllum), willow (Salix spp.) and Eucalyptus (Eucalyptus spp.) with a stem ground line diameter of 3 inches or less. Mix 24 to 48 ounces of CHOPPER in one gallon of diesel oil or penetrating oil. Maintain uniform mixtures with frequent agitation. Direct a thin line of the spray solution to the stems beginning a few feet from the ground and descending toward the base of the tree making a zig-zag motion. Do not over apply causing puddling.

LOW VOLUME BASAL BARK TREATMENTS

Mix 8.0-12.0 fluid ounces of CHOPPER in one gallon of diesel oil or a penetrating oil. To control mixed brush species with up to 4 inch stem diameter at breast height, spray to wet the lower 12-18 inches of the stem with the CHOPPER oil mixture (include the root collar area). **DO NOT** over apply causing dripping or puddling. Maintain uniform mixtures with frequent agitation. CHOPPER may be tank-mixed with Garlon 4, Brush Killer 800 and other basal products to broaden the spectrum of control. Consult the herbicide labels for rates and susceptible brush species. When tank-mixing, follow all precautions on the tank-mix product label and always follow the most restrictive label. Use a tank mix of 3 to 5% CHOPPER herbicide plus 15 to 20% Garlon 4 in basal oil to control black locust, honey locust, hackberry, elms and other species listed on manufacturer's labels. Use the higher rate of CHOPPER herbicide (5%) in areas containing sassafras, oak, hickory, cherry, and maples or in the southern 2/3's of the U.S. A tank-mix of 3% CHOPPER herbicide + Garlon 4 is effective in the Northeastern U.S.

LOW VOLUME FOLIAR APPLICATIONS

CHOPPER herbicide may be applied as a low volume foliar application. Mix 3-5% CHOPPER herbicide in water and adjuvant or in a penetrating oil. For small brush spray down on the crown to cover approximately 70% of the plant foliage. For larger brush insure coverage on as much of the crown as possible and spray at least two sides of the plant. CHOPPER herbicide may be tank-mixed with other labeled herbicides. Use a tank mix of 3 to 5% CHOPPER herbicide plus 15 to 20% Garlon 4 in basal oil to control black locust, honey locust, hackberry, elms and other species listed on manufacturer's labels. Use the higher rate of CHOPPER herbicide (5%) in areas containing sassafras, oak, hickory, cherry, and maples or in the southern 2/3's of the U.S. A tank-mix of 3% CHOPPER herbicide + Garlon 4 is effective in the Northeastern U.S.

SPRAY SOLUTION MIXING GUIDE FOR LOW VOLUME FOLIAR APPLICATIONS

AMOUNT OF SPRAY SOLUTION BEING PREPARED	DESIRED CONCENTRATION (fluid volume)			
	3%	5%	15%	20%
1 gallon	3.8 oz.	6.4 oz.	19.2 oz.	25.6 oz.
3 gallons	11.5 oz.	19.2 oz.	57.6 oz.	76.8 oz.
4 gallons	15.4 oz.	25.6 oz.	76.8 oz.	102.4 oz.
5 gallons	19.2 oz.	32.0 oz.	96.0 oz.	1.0 gallon
50 gallons	1.5 gallons	2.5 gallons	7.5 gallons	10.0 gallons
100 gallons	3.0 gallons	5.0 gallons	15.0 gallons	20.0 gallons

12 7 17

INVERT EMULSIONS

CHOPPER herbicide can be applied as an invert emulsion carrier. The carrier is a thick invert water-in-oil spray emulsion designed to minimize spray drift and spray run-off, resulting in more herbicide on the target foliage. The spray emulsion may be formed in a single tank (batch mixing) or injected (in-line mixing). Consult the invert chemical label for proper mixing directions. Do not exceed 3 quarts/Acre of CHOPPER herbicide.

WEEDS CONTROLLED

CHOPPER herbicide will provide postemergence control and some residual control of the following target vegetation species. Degree of control is both species and rate dependent.

GRASSES

The species of annual and perennial grasses controlled by CHOPPER herbicide include the following:

- Annual bluegrass (Poa annua)
- Bahiagrass (Paspalum notatum)
- Barnyardgrass (Echinochloa crus-galli)
- Beardgrass (Andropogon spp.)
- Bermudagrass (Cynodon dactylon)
- Big bluestem (Andropogon gerardii)
- Broadleaf signalgrass (Brachiaria platyphylla)
- Canada bluegrass (Poa compressa)
- Cattail (Typha spp.)
- Cheat (Bromus secalinus)
- Cogongrass (Imperata cylindrica)¹
- Crabgrass (Digitaria spp.)
- Crowfootgrass (Dactyloctenium aegyptium)
- Dallisgrass (Paspalum dilatatum)
- Downy brome (Bromus tectorum)
- Fall panicum (Panicum dichotomiflorum)
- Feathertop (Pennisetum villosum)
- Fescue (Festuca spp.)
- Foxtail (Setaria spp.)
- Giant reed (Arundo donax)
- Goosegrass (Eleusine indica)
- Guineagrass (Panicum maximum)
- Italian ryegrass (Lolium multiflorum)
- Itchgrass (Rottboellia exaltata)
- Johnsongrass (Sorghum halepense)
- Junglerice (Echinochloa colonum)
- Kentucky bluegrass (Poa pratensis)
- Lovegrass (Eragrostis spp.)
- Orchardgrass (Dactylis glomerata)
- Panicum spp.

- Paragrass (Brachiaria mutica)
- Phragmites (Phragmites australis)
- Prairie cordgrass (Spartina pectinata)
- Prairie threeawn (Aristida oligantha)
- Quackgrass (Agropyron repens)
- Reed canary grass (Phalaris arundinacea)
- Saltgrass (Distichlis stricta)
- Sand dropseed (Sporobolus cvryptandrus)
- Sandbur (Cenchrus spp.)
- Signalgrass (Brachiaria platyphylia)
- Smooth brome (Bromus inermis)
- Sprangletop (Leptochloa spp.)
- Timothy (Phleum pratense)
- Torpedograss (Panicum repens)
- Vaseygrass (Paspalum urvillei)
- Wild barley (Hordeum spp.)
- Wild oats (Avena fatua)
- Wirestem muhly (Muhlenbergia frondosa)
- Witchgrass (Panicum capillare)
- Woolly cupgrass (Eriochloa villosa)

¹Use minimum of 48 oz per acre.

BROADLEAF WEEDS

The species of annual and perennial broadleaf weeds controlled by CHOPPER herbicide include the following:

- Arrowwood (Pluchea sericea)
- Broom snakeweed (Gutierrezia sarothrae)
- Bull Thistle (Cirsium vulgare)
- Burclover (Medicago spp.)
- Burdock (Arctium spp.)
- Camphorweed (Heterotheca subaxillaris)
- Carolina geranium (Geranium carolinianum)
- Carpetweed (Mullugo verticillata)
- Chickweed, mouseear (Cerastium vulgatum)
- Clover (Trifolium spp.)
- Cocklebur (Xanthium strumarium)
- Common chickweed (Stellaria media)
- Common ragweed (Ambrosia artemisiifolia)
- Cudweed (Gnaphalium spp.)
- Dandelion (Taraxacum officinale)
- Desert camelthorn (Alhagi pseudalhagi)
- Diffuse knapweed (Centaurea diffusa)
- Dock (Rumex spp.)
- Dogfennel (Eupatorium capillifolium)

- Fiddleneck (Amsinckia intermedia)
- Filaree (Erodium spp.)
- Fleabane (Erigeron spp.)
- Giant ragweed (Ambrosia trifida)
- Goldenrod (Solidago spp.)
- Gray rabbitbrush (Chrysothamnus nauseosus)
- Henbit (Lamium aplexicaule)
- Hoary vervain (Verbena stricta)
- Horseweed (Conyza canadensis)
- Indian mustard (Brassica juncea)
- Japanese bamboo/knotweed (Polygonum cuspidatum)
- Knotweed, prostrate (Polygonum aviculare)
- Kochia (Kochia scoparia)
- Lambsquarters (Chenopodium album)
- Little mallow (Malva parviflora)
- Milkweed (Asclepias spp.)
- Miners lettuce (Montia perfoliata)
- Mullein (Verbascum spp.)
- Nettleleaf goosefoot (Chenopodium murale)
- Oxeye daisy (Chrysanthemum leucanthemum)
- Pepperweed (Lepidium spp.)
- Pigweed (Amaranthus spp.)
- Plantain (Plantago spp.)
- Pokeweed (Phytolacca americana)
- Primrose (Oenothera kunthiana)
- Puncturevine (Tribulus terrestris)
- Purple loosestrife (Lythrum salicaria)
- Purslane (Portulaca spp.)
- Pusley, Florida (Richardia scabra)
- Rocket, London (Sisymbrium irio)
- Rush skeletonweed (Chondrilla juncea)
- Russian knapweed (Centaurea repens)
- Russian thistle (Salsola kali)
- Saltbush (Atriplex spp.)
- Shepherd's purse (Capsella bursa-pastoris)
- Silverleaf nightshade (Solanum elaeagnifolium)
- Smartweed (Polygonum spp.)
- Sorrell (Rumex spp.)
- Sowthistle (Sonchus spp.)
- Spurge, annual (Euphorbia spp.)
- Stinging nettle (Urtica dioica)
- Sunflower (Helianthus spp.)
- Sweet clover (Melilotus spp.)
- Tansymustard (Descurainia pinnata)
- Texas thistle (Cirsium texanum)
- Velvetleaf (Abutilon theophrasti)
- Western ragweed (Ambrosia psilostachya)
- Wild carrot (Daucus carota)

- 15 7-17
- Wild lettuce (Lactuca spp.)
 - Wild parsnip (Pastinaca sativa)
 - Wild turnip (Brassica campestris)
 - Woollyleaf bursage (Ambrosia grayi)
 - Yellow starthistle (Centaurea solstitialis)
 - Yellow woodsorrel (Oxalis stricta)

VINES AND BRAMBLES

The species of vines and brambles controlled by CHOPPER herbicide include the following:

- Field bindweed (Convolvulus arvensis)
- Greenbriar (Smilax spp.)
- Hedge bindweed (Calystegia sequium)
- Honeysuckle (Lonicera spp.)
- Kudzu (Pueraria lobata)^{1,2}
- Morningglory (Ipomoea spp.)
- Poison ivy (Rhus radicans)
- Redvine (Brunnichia cirrhosa)
- Trumpet creeper (Campsis radicans)
- Virginia creeper (Parthenocissus quinquefolia)
- Wild buckwheat (Polygonum convolvulus)
- Wild grape (Vitis spp.)
- Wild rose (Rosa spp.)¹
 - Including: Multiflora rose (Rosa multiflora)
 - Macartney rose (Rosa bracteata)

¹Use higher labeled rates.

²Use a minimum of 75 GPA - Control of established stands may require multiple applications.

WOODY BRUSH AND TREES

The species of woody brush and trees controlled by CHOPPER herbicide include the following:

- Alder (Alnus spp.)
- American beech (Fagus grandifolia)
- Ash (Fraxinus spp.)¹
- Aspen (Populus spp.)
- Australian pine (Casuarina equisetifolia)⁵
- Autumn olive (Elaeagnus umbellata)
- Bald cypress (Taxodium distichum)⁴
- Bigleaf maple (Acer macrophyllum)
- Birch (Betula spp.)⁵
- Black locust (Robina pseudoacacia)⁵
- Black oak (Quercus kelloggii)
- Blackgum (Nyssa sylvatica)²
- Boxelder (Acer negundo)

- Brazilian peppertree (Schinus terebinthifolius)
- Ceanothis (Ceanothis spp.)
- Cherry (Prunus spp.)^{1,2}
- Chinaberry (Melia azedarach)
- Chinese tallow-tree (Sapium sebiferum)
- Chinquapin (Castanopsis chrysophylla)⁵
- Cottonwood (Populus spp.)
- Cypress (Taxodium spp.)
- Dogwood (Cornus spp.)¹
- Elderberry (Sambucus spp.)⁵
- Elm (Ulmus spp.)⁵
- Eucalyptus (Eucalyptus spp.)
- Hawthorn (Crataegus spp.)
- Hazel (Corylus cornuta)⁵
- Hickory (Carya spp.)¹
- Holly (Ilex spp.)^{1,4}
 - Including Gallberry (Ilex glabra)^{4,5}
 - Tall gallberry (Ilex coriacea)⁴
 - Yaupon (Ilex vomitoria)⁴
- Honey locust (Gleditsia triacanthos)⁵
- Huckleberry (Gaylussacia spp.)
- Lyonia spp.
 - Including Fetterbush (Lyonia lucida)
 - Staggerbush (Lyonia mariana)
- Madrone (Arbutus menziesii)
- Maple (Acer spp.)
- Melaleuca (Melaleuca quinquenervia)
- Mulberry (Morus spp.)^{1,3}
- Oak (Quercus spp.)
- Persimmon (Diospyros virginiana)²
- Poison oak (Rhus diversiloba)
- Poplar (Populus spp.)²
- Privet (Ligustrum vulgare)
- Red alder (Alnus rubra)
- Red maple (Acer rubrum)
- Saltcedar (Tamarix pentandra)
- Sassafras (Sassafras albidum)
- Scotch broom (Cytisus scoparius)⁵
- Sourwood (Oxydendrum arboreum)²
- Sumac (Rhus spp.)
- Sweetbay magnolia (Magnolia virginiana)^{4,5}

- ¹ Use higher labeled rates.
- ² Best control with applications prior to formation of fall leaf color.
- ³ The degree of control may be species dependent.
- ⁴ Oil emulsion carrier is recommended.
- ⁵ Tankmix with Garlon 4 as a basal or cut stump treatment

DISCLAIMER

The label instructions for the use of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and should be followed carefully. However, it is impossible to eliminate all risks inherently associated with use of this product. Ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the use or application of the product contrary to label instructions, all of which are beyond the control of American Cyanamid Company. All such risks shall be assumed by the user.

American Cyanamid Company warrants only that the material contained herein conforms to the chemical description on the label and is reasonably fit for the use therein described when used in accordance with the directions of use, subject to the risks referred to above.

Any damages arising from a breach of this warranty shall be limited to direct damages and shall not include consequential commercial damages such as loss of profits or values of any other special or indirect damages.

American Cyanamid Company makes no other express or implied warranty, including other express or implied warranty of FITNESS or of MERCHANTABILITY.
