DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Apply 12 to 16 fluid ounces of ARSENAL herbicide Applicators Concentrate per acre in broadcast applications with helicopter or ground application equipment for suppression of labeled woody vegetation and release of loblolly pine seedlings. Refer to mixing and application instructions on the ARSENAL Applicators Concentrate leaflet label for proper spray volumes.

Apply ARSENAL Applicators Concentrate spray solutions in late summer or fall after formation of final resting buds on the loblolly pine but before leaves begin to drop on deciduous species. DO NOT make applications during periods of active loblolly pine height growth. To minimize possibility of height growth suppression, do not apply ARSENAL Applicators Concentrate when loblolly pine seedlings are under stress from diseases, animal or winter injury, planting shock, or other causes.

This label must be in the possession of the user at the time of herbicide application.
