

**FOR HARDWOOD SUPPRESSION IN RELEASE  
OF LOBLOLLY PINE (*Pinus taeda*) FROM  
WOODY VEGETATION**

**OBSERVE ALL PRECAUTIONARY STATEMENTS IN THE  
ARSENAL HERBICIDE APPLICATORS CONCENTRATE  
LEAFLET LABEL BEFORE USING**

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

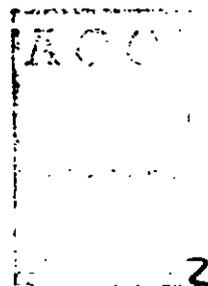

Apply 12 to 16 fluid ounces of ARSENAL herbicide Applicators Concentrate per acre in broadcast applications using helicopter or ground application equipment for suppression of labeled woody vegetation and release of loblolly pine seedlings. Refer to mixing and application instructions on the ARSENAL Applicators Concentrate leaflet label for proper spray volumes. Rates less than 16 ounces per acre are for hardwood suppression only, and some hardwood resprouting should be expected. Apply ARSENAL Applicators Concentrate spray solutions in summer or fall but before leaves begin to drop on deciduous species. To minimize possibility of height growth suppression of loblolly pine, do not apply ARSENAL Applicators Concentrate when loblolly pine seedlings are under stress from diseases, animal or winter injury, planting shock, or other causes.

This label must be in the possession of the user at time of herbicide application.
