**PURSUIT AND ROUNDUP¹ TANK-MIXTURE FOR WEED CONTROL IN
NO-TILL SOYBEANS
AND PURSUIT USE IN ROUNDUP READY¹ SOYBEANS**

OBSERVE ALL PRECAUTIONARY STATEMENTS IN THE PURSUIT LEAFLET LABEL BEFORE USING. SEE THE PURSUIT LEAFLET LABEL FOR USE AREA, MIXING AND APPLICATION INFORMATION, WEEDS CONTROLLED AND ROTATIONAL CROP RESTRICTIONS.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. DO NOT apply this product through any type of irrigation system. THIS LABEL MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF PESTICIDE APPLICATION.

GENERAL INFORMATION

PURSUIT provides control of many broadleaf and grassy weeds when applied to the soil or postemergence to weeds. It also provides season-long control of many weeds. It can be applied no-till to soybeans either as a burndown prior to planting or postemergence to soybeans for weed control. Roundup may be tank-mixed with PURSUIT for burndown applications for control of difficult weeds common to no-till production, such as marestail.

PURSUIT may also be applied to Roundup Ready soybeans.

BURNDOWN WEED CONTROL (No-till soybeans and stale seedbed)

Apply PURSUIT plus Roundup for burndown of weeds in no-till soybeans. This tank mixture may be applied prior to planting any soybean variety (including Roundup Ready soybeans). Roundup will enhance the control of weeds including marestail, common lambsquarters, common ragweed and waterhemp species. Always include a non-ionic surfactant and ammonium sulphate or a liquid fertilizer such as 28%N. Refer to the Roundup label for recommended rates of application.

ROUNDUP READY SOYBEANS (glyphosate resistant)

PURSUIT may be used for weed control in Roundup Ready soybeans. Apply PURSUIT either preplant soil applied, preplant as a burndown treatment, or for postemergence weed control.

PURSUIT may be tank-mixed with other herbicides for control of weeds not on the PURSUIT label. The tank mixture of PURSUIT and Roundup is not recommended on Roundup Ready soybeans (refer to the Roundup label). See the PURSUIT label for recommended herbicides. Refer to the other herbicide labels for weeds controlled and recommended applications rates. For sequential treatments, a sufficient time period should occur between treatments to allow an appropriate assessment of weed control needs.

(See other side)

10/2

(In North Dakota and in Minnesota north of highway #210 apply 3 ounces per acre.)

Refer to the Roundup label for recommended use rates.

MIXING INSTRUCTIONS

BURNDOWN OR POSTEMERGENCE APPLICATIONS REQUIRE THE ADDITION OF AN ADJUVANT AND FERTILIZER.

SURFACTANTS: Use a non-ionic surfactant containing at least 80% active ingredient. Apply the surfactant at the rate of 1 quart per 100 gallons.

OR

CROP OIL CONCENTRATE: If herbicides other than Roundup are mixed with PURSUIT, a petroleum or vegetable based oil concentrate (such as SUN-IT II²) may be used instead of a surfactant. SUN-IT II is recommended when weeds are under moisture or temperature stress. Use SUN-IT II or methylated seed oils at the rate of 1.5 to 2 pints per acre (use the higher rate when weeds are at the maximum label size), or use a crop oil concentrate at 2 pints per acre. Do not use a crop oil concentrate when Roundup is tank-mixed with PURSUIT.

AND

FERTILIZER: Include a fertilizer in the spray solution. When Roundup is used with PURSUIT, add spray grade ammonium sulfate at the rate of 2.5 lb. per acre. Instead of ammonium sulfate, a nitrogen-based liquid fertilizer (such as 28%N, 32%N or 10-34-0) may be used at the rate of 1-2 quarts per acre. Use the higher rate when weeds are under moisture or temperature stress.

Refer to the PURSUIT label for additional information regarding WEEDS CONTROLLED, MIXING AND SPRAYING INSTRUCTIONS, PRECAUTIONARY STATEMENTS AND WORKER PROTECTION INFORMATION. Refer to the Roundup label or other herbicide labels for additional information regarding application rates, weeds controlled and other information.
