

General Information

Ground Zero is a nonselective herbicide that can be applied in water or oil before or after plant growth begins. Although Ground Zero has considerable activity through foliar contact much of its activity is through roots, therefore, its effectiveness is dependent on rainfall to move it into the root zone. Very dry soil conditions and lack of sufficient rainfall may result in poor weed control.

Use only in areas where complete control of all vegetation is desired, such as industrial sites, rights of way, lumberyards, petroleum tank farms, around farm buildings, along fence lines, etc. When applied to the soil, this product usually inhibits plant growth for a year or more. It should not be used on land to be cropped, or near adjacent desirable trees, shrubs, or plants or injury may occur.

It is noncorrosive to equipment.

Directions for Use

Ground Zero can be applied prior to or up to 3 months after weed emergence. Application rates vary from 6 pints to 4½ gals. of Ground Zero per 1000 sq. ft. depending on climatic conditions, soil type, the weeds present and the stage of growth of the weeds. In the following rate

GROUND ZERO

For weed control on industrial sites and noncrop areas around-the-farm.

Controls Johnsongrass, bindweed, and other hard-kill weeds.

Active Ingredient:

2,4-bis (isopropylamino)-6-methoxy-s-triazine 4%

Inert Ingredients: 96%

Total 100%

DIRECTIONS FOR USE AND CONDITIONS OF SALE AND WARRANTY

IMPORTANT: Read the entire Directions For Use and the Conditions Of Sale And Warranty before using this product.

Caution: Keep out of reach of children. Harmful if swallowed.

Avoid contact with eyes and skin. In case of skin contact, wash with soap and water. Avoid inhalation of spray mist.

Avoid contamination of food and feed.

Do not contaminate water used for irrigation or domestic purposes.

Do not reuse container. Destroy when empty.

Do not use, pour, spill, or store near heat or open flame.

Store at temperatures above 32°F.

Net Contents: 1 Liquid Gallons

recommendations, the higher rates are intended for use on heavier soils, where weed growth is heavy, and where rainfall is expected to be relatively high. The higher rates should also be used where longer residual control is desired in regions with a long growing season.

For best results apply Ground Zero at rates recommended below prior to weed emergence or when weeds are young and actively growing.

For control of annual and susceptible perennial weeds (such as downy brome-grass, oatgrass, goosegrass, quackgrass, puncture vine, goldenrod, and plantain): Broadcast 6-9 pints Ground Zero in 2-3 gals. of water per 1,000 sq. ft.

For control of hard-to-kill perennial weeds and grasses (such as Johnsongrass, bindweed, and wild carrot): Broadcast 3½ to 4½ gals. Ground Zero in 2-3 gals. of water per 1,000 sq. ft.

For faster top-kill of existing vegetation, apply Ground Zero in diesel oil, fuel oil, or weed oil at rates of 2-4 gals. of oil per 1,000 sq. ft. Tall, dense vegetation such as Johnsongrass will generally require 3 or more gals. of oil per 1,000 sq. ft. for thorough coverage.
