

DIRECTIONS for use on Lawns

WEEDONE® CHICKWEED CONTROL controls many of the broadleaf weeds that are resistant to 2,4-D – common and mouse-ear chickweed, henbit, clover, yarrow and prostrate (spotted) spurge.

When To Spray

Treat any time during the year when weeds are growing actively and temperatures over 40° are expected for at least one week after treatment.

Yarrow and mouse-ear chickweed may require a second treatment in 2 to 3 weeks to obtain maximum control. It is often practical to spot treat these weeds the second time.

AMOUNTS TO USE AMCHEM METER-MISER®

WEEDONE CHICKWEED CONTROL	Add Water to Make	Square Feet Covered
¾ pint	2½ gallons	2,500
1.5 pint	5 gallons	5,000

Knapsack or Pressure Sprayers

Area Sprayed	WEEDONE CHICKWEED CONTROL	Water
200 sq. ft. (10' x 20')	2 tablespoons (1 fluid ounce)	1 gallon
750 sq. ft. (25' x 30')	4 fluid ounces (8 tablespoons)	2½ gallons
1,500 sq. ft. (30' x 50')	8 fluid ounces (½ pint)	5 gallons
3,000 sq. ft. (30' x 100')	1 pint	10 gallons
6,000 sq. ft. (60' x 100')	1 quart	20 gallons

Hose Attached Sprayers – Lawn Models

Use 1½ fluid ounces of WEEDONE CHICKWEED CONTROL diluted with water to the 3 to 5 gallon mark on the sprayer jar for each 500 square feet (25' x 20') of lawn area to be sprayed. Adjust water pressure so that spray streams about 10-15 feet with no misting. Take usual precautions to prevent spray drift.

MIXING SPRAYS

AMCHEM METER-MISER: Fill the sprayer 1/3 full with water. Pour in WEEDONE CHICKWEED CONTROL. Replace cap on METER-MISER and mix thoroughly by rolling METER-MISER back and forth several times. Fill tank to desired level. Follow operating directions on METER-MISER.

Knapsack or Tank-Type Sprayer: Fill the sprayer tank 1/3 full with water. Pour in WEEDONE CHICKWEED CONTROL and mix thoroughly. Fill tank with water and mix again.

TURF TOLERANCE

Most cool season grasses, with the exception of bentgrass, tolerate this product at rates required for weed control. To control weeds in bentgrass areas or grasses in heavy shade, treat with two half-strength sprays about two weeks apart.

St. Augustine, centipede, carpet grass and lawn grass substitutes such as Lippia and Dichondra are sensitive to this product and should be tested on a small scale (using half rates) before the entire lawn is treated.

Bermuda and Zoysia grass should not be treated during the period of breaking dormancy in the spring. Tifdwarf Bermuda grass is not tolerant to this treatment.

Delay any re-seeding for at least 3 to 4 weeks after the last treatment.

FRANCE

erson grasses, with the ex-
ntgrass, tolerate this prod-
required for weed control.
