HOW TO PREPARE A SPRAY: Add the required amount of water to the spray tank, then add this product with agitation and finally the balance of the water, with continued agitation.

This material is to be used in straight mixtures. Do not let water get into the water tank with continued agitation.

This material is to be used in straight mixtures. Do not let water get into the finished mixture.

This material forms an emulsion in water, but a solution. The solution separates on standing. Provide agitation to prevent such separation and ensure a uniform spray mixture.
