GENERAL INFORMATION

Citrus trees sprout vigorously from the root stocks and pruning cuts made on hard wood branches. Excessive sprouting on young non-bearing trees reduces maximum growth of scaffold branches while decreasing the efficiencies of maintenance sprouts by producing a dense leaf canopy.

3 of 4

TRE-HOLD® Sprout Inhibitor for citrus paint controls sprouting from pruning cuts, trunks, and root stock. TRE-HOLD Sprout Inhibitor for Citrus is a ready to use product formulated in a white latex white to protect against sun scald damage. FOR NECTARINES, the product is diluted - see dilution chart.

Thorough coverage immediately after pruning is necessary for maximum sprout inhibition. Do not allow TRE-HOLD to contact buds or foliage as injury may result. Mix thoroughly before using.

DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL AND STATE LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING.

Sprouting From Scaffold Limbs: Remove unwanted sprouts and thoroughly coat cut surfaces and surrounding bark.

Sprouting form Trunk: Remove trunk suckers and water sprouts and apply TRE-HOLD to the entire trunk from ground line to scaffold limbs.

Rootstock: Citrus rootstock which is healthy, vigorous and free from stress may be treated. After planting apply TRE-HOLD from the ground line to the first scaffold branches. Do not allow the product to puddle at the base of the tree as injury and stand loss may occur. In temperate zones where freezing may injure scaffold branches, restrict treatment to the frost-free period to allow for a short period of growth between treatment and damaging freeze.

For nectarines use 1/4 of the standard rate as shown in the following examples:

AMOUNT OF TRE-HOLD® SPROUT INHIBITOR PAINT	AMOUNT OF WATER	TOTAL VOLUME
2.5 fluid ounces	123.5 fluid ounces	1 gallon
2 gallons	98 gallons	100 gallons
