TANK MIX DIRECTIONS FOR USE

CROP: Fall and Spring-seeded wheat and barley.

GEOGRAPHIC AREA: Use only in the states of Idaho, Oregon, Washington, and Montana.

TARGET PESTS: All weeds listed on the Bucril package label and on the Finesse product label.

RATE: Apply Bucril at 3/4-1 1/2 pints/A and Finesse at 1/6-1/3 ounce/A.

APPLICATION: Apply to wheat and barley in the fall or spring at any time after the crop is in the 2-3 leaf stage but before the boot stage.

Ground Application: Use a standard herbicide boom sprayer that provides uniform and accurate application. Sprayer should be equipped with flat fan nozzles spaced a maximum of 20 inches apart and screens no finer than 50 mesh in the nozzle tips and in-line strainers. Apply a minimum spray volume of 10 gallons per acre with minimum spray pressure of 30 psi at the nozzle tips.

Aerial Application: The sprayer should be equipped to provide a uniform and accurate application. Use a minimum spray volume of 5 gallons per acre using diaphragm-type nozzles that produce cone or fan spray patterns with a maximum spray pressure of 40 psi at the nozzle tips. Nozzles should be located no further than 3/4 the distance from the center of the aircraft to the end of the wing or rotor. Nozzles should be oriented at an angle between straight down and straight back. The aircraft should discharge the spray a maximum of 10 feet above the crop. To minimize drift, do not apply during periods of gusty winds or when wind exceeds 5 MPH.
