# **RESTRICTED USE PESTICIDE**

## **DUE TO TOXICITY CATEGORIES.**

For retail sale to and use only by Certified Applicators or persons under the direct supervision and only for those uses covered by the Certified Applicator's certification. Child Resistant Packaging Required.

# **Hussar<sup>®</sup> Herbicide**

**A Herbicide for the Control of Broadleaf Weeds in Winter and Spring Wheat (including Durum).**

**ACTIVE INGREDIENT:** Iodosulfuron-Methyl-Sodium (CAS Number 144550-36-7)..... **5.0%**

**INERT INGREDIENTS:**..... **95.0%**

**TOTAL: 100.0%**

This product is a water dispersible granule containing 5% of the active ingredient Iodosulfuron-methyl-sodium by weight.

**EPA Reg No. 264-IEN**

**EPA Est. No.**

## **KEEP OUT OF REACH OF CHILDREN DANGER — PELIGRO**

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.  
(If you do not understand the label, find someone to explain it to you in detail.)

For **MEDICAL** And **TRANSPORTATION** Emergencies **ONLY** Call 24 Hours A Day 1-800-334-7577

For **PRODUCT USE** Information Call 1-866-99BAYER (1-866-992-2937)

### **FIRST AID**

|                                |   |
|--------------------------------|---|
| <b>IF IN EYES:</b>             | <ul style="list-style-type: none"><li>• Hold eye open and rinse slowly and gently with water for 15-20 minutes.</li><li>• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.</li><li>• Call a poison control center or doctor for treatment advice.</li></ul>   |
| <b>IF SWALLOWED:</b>           | <ul style="list-style-type: none"><li>• Immediately call a poison control center or doctor for treatment advice.</li><li>• Do not induce vomiting unless told to do so by a poison control center or doctor.</li><li>• Have person sip a glass of water if able to swallow.</li><li>• Do not give anything by mouth to an unconscious person.</li></ul> |
| <b>IF ON SKIN OR CLOTHING:</b> | <ul style="list-style-type: none"><li>• Take off contaminated clothing.</li><li>• Rinse skin immediately with plenty of water for 15-20 minutes.</li><li>• Call a poison control center or doctor for treatment advice.</li></ul>   |

**For MEDICAL Emergencies Call 24 Hours A Day 1-800-334-7577.**

**Have the product container or label with you when calling a poison control center or doctor or going for treatment.**

**NOTE TO PHYSICIAN:** Immediately flood the eye with copious amounts of water for 20 minutes followed by an ophthalmologist evaluation if redness in the eye persists for more than three days.

ACCEPTED  
with COMMENTS  
in EPA Letter Dated

JUN 10 2009

Under the Federal Insecticide,  
Fungicide, and Rodenticide Act  
as amended, for the pesticide  
registered under EPA Reg. No.

264-820

## PRECAUTIONARY STATEMENTS

### HAZARDS TO HUMANS AND DOMESTIC ANIMALS

#### DANGER

Corrosive. Causes irreversible eye damage. Do not get in eyes or on clothing. Wear protective eyewear (goggles, face shield, or safety glasses). Harmful if swallowed or absorbed through skin. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing before reuse. Wear: Long-sleeved shirt and long pants, Socks, Shoes, and chemical-resistant gloves (such as Natural Rubber, Selection Category A).

#### Personal Protective Equipment (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category A on an EPA chemical resistance category selection chart.

#### Applicators and other handlers must wear:

- Long-sleeved shirt and long pants,
- socks plus shoes,
- chemical resistant gloves made of any waterproof material and
- protective eyewear.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

### USER SAFETY RECOMMENDATIONS

#### Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

#### Engineering control statement:

When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [(40 CFR §170.240(d)(4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.

### ENVIRONMENTAL HAZARDS

This product is toxic to non-target plants. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate any body of water and do not apply when/where conditions could favor runoff. Do not contaminate water by cleaning of equipment or disposal of equipment washwaters. Do not drain or rinse equipment near desirable vegetation.

### DIRECTIONS FOR USE

**It is a violation of Federal law to use this product in a manner inconsistent with its labeling.**

Do not use this product until you have read the entire label. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses; and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry-interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: Coveralls, chemical-resistant gloves made of any waterproof material, socks, shoes and protective eyewear.

40/10

## STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

### PESTICIDE STORAGE:

Keep container tightly closed when not in use. Avoid cross contamination with other pesticides.

### PESTICIDE DISPOSAL:

Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

### CONTAINER DISPOSAL:

Non-refillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then puncture and disposed of in a sanitary landfill, or by incineration; or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Hussar® Herbicide is a selective postemergence herbicide for use in spring, durum, and winter wheat for the control of annual broadleaf weeds.

## ENVIRONMENTAL and BIOLOGICAL ACTIVITY

Hussar® Herbicide is absorbed mainly by the foliage of weeds and is active against many important broadleaf weeds (see list below for details). It is predominately a foliar herbicide with less activity via the soil. Hussar® Herbicide will not reliably control weeds that emerge after spraying.

Environmental conditions which support vigorous growth of crop and weeds result in highest herbicidal activity. Speed of action depends on environmental conditions and increases with increasing temperature and moisture. Sensitive weeds quickly stop growing and no longer compete with the crop. Visible signs of activity include termination of plant development, yellowing and/or reddening of weeds, and finally plant death. Under favorable conditions plant death can occur within 3-4 weeks after application.

Abnormal environmental conditions (excess soil moisture or drought, extreme cold weather) can influence crop tolerance and herbicidal activity and may cause temporary damage to the crop or reduced levels of weed control. The result may be weed stunting rather than weed death. However, competition will be greatly reduced, and should permit normal crop development. In winter wheat, Hussar® Herbicide can be applied either in the fall or spring.

## CROPS

Hussar® Herbicide may be used on winter and spring wheat, including durum.

## SPRAY ADJUVANTS

Hussar® Herbicide must be used with a spray adjuvant. The recommended spray adjuvant is non-ionic surfactant (NIS). Use only nonionic surfactants which are approved by EPA for use on food crops and which contain at least 80 percent active ingredient.

Non-ionic surfactants should be used at 0.25 – 0.5% in the spray solution. It is also recommended that spray grade nitrogen fertilizer be added. Use 28% or 32% UAN at 2 qts per acre or AMS at 3 lbs/acre.

Additives that lower the pH of the spray solution below pH 6 are not recommended. Best results are obtained at spray solution pH of 6.0-8.0.

## APPLICATION IN FLUID FERTILIZER

Hussar® Herbicide may be applied using a liquid nitrogen solution as the spray carrier. For fall applications the fertilizer solution should not exceed 50% liquid nitrogen and not exceed 30 pounds of actual nitrogen per acre. A NIS surfactant at a maximum of 0.25% (v/v) is required in the spray solutions containing liquid nitrogen.

Due to the innate activity of fertilizer on the crop, temporary injury may result when liquid nitrogen is used as a spray carrier. Crop response symptoms due to the use of liquid nitrogen as a spray carrier may include discoloration or leaf burn. Spring applications of fertilizer solutions containing more than 50% liquid nitrogen may result in excessive leaf burn from the liquid nitrogen solution.

5 of 10

## APPLICATION INSTRUCTIONS

Hussar Herbicide may be applied up to two times per 365 days, at least 14 days apart as a post emergence treatment in wheat. The maximum cumulative amount of Iodosulfuron-methyl-sodium active ingredient must not exceed 0.009 lbs ai per acre per 365 days (equivalent to 2.85 oz Hussar). Apply Hussar Herbicide to the wheat crop between the 3-leaf stage up to jointing.

The most consistent weed control is obtained by applying Hussar® Herbicide to broadleaf weeds before they are larger than 4 inches. The most consistent weed control is obtained by ensuring thorough spray coverage of the target weeds. Select spray volume to ensure optimum coverage.

Calibrate spray equipment before use. Apply Hussar® Herbicide as a broadcast spray in 5 or more gallons of water per acre using ground application equipment. For weed control in dense canopies, use 15 to 20 gallons of water per acre. Heavy weed infestations should be treated before they become competitive with the crop.

Select spray nozzles that provide the best spray distribution and weed coverage at the appropriate spray pressure. Avoid uneven spray distribution, skips, overlaps, and spray drift.

Apply spray mixtures within 24 hours of mixing to avoid product degradation.

Do not apply by aerial application.

Do not apply Hussar® Herbicide through irrigation systems.

Do not apply more than 2.85 oz per acre of Hussar® Herbicide per crop year.

See the *Spray Drift Management* section of this label for additional information on proper application of Hussar® Herbicide.

## WEED CONTROL DIRECTIONS

### Rate Tables for Weed Control

Apply Hussar® Herbicide at 0.7 – 2.85 oz per acre in the fall or spring to actively growing weeds. Select appropriate rate from options in the following table: *Weeds Controlled*.

Apply Hussar® Herbicide before wheat begins to joint to avoid crop response.

### Weeds Controlled

Hussar® Herbicide effectively controls the following weed when applied at the rates and weed stages shown and when weeds are actively growing.

## Weeds Controlled

| Common name            | Scientific name                | Application Rates    |           |
|------------------------|--------------------------------|----------------------|-----------|
|                        |                                | 0.7 oz/A             | 2.85 oz/A |
| Broadleaves Controlled |                                | Weed Height (inches) |           |
| Shepherdspurse         | <i>Capsella bursa-pastoris</i> | 1-3                  | 1-4       |
| Field pennycress       | <i>Thlaspi arvense</i>         | 1-3                  | 1-4       |
| Tansy mustard          | <i>Descurania pinnata</i>      | 1-3                  | 1-4       |
| Blue mustard           | <i>Chorispora tenella</i>      | 1-3                  | 1-4       |
| Black mustard          | <i>Brassica nigra</i>          | 1-3                  | 1-4       |
| Wild mustard           | <i>Brassica kaber</i>          | 1-3                  | 1-4       |
| Volunteer canola       | <i>Brassica rapa</i>           | 1-3                  | 1-4       |
| Pigweed                | <i>Amaranthus retroflexus</i>  | NA                   | 1-4       |
| Common chickweed       | <i>Stellara media</i>          | 1-3                  | 1-4       |
| Henbit                 | <i>Lamium amplexicaule</i>     | 1-3                  | 1-4       |
| Corn buttercup         | <i>Ranunculus arvensis</i>     | 1-3                  | 1-4       |
| Wild radish            | <i>Raphanus raphanistrum</i>   | 1-3                  | 1-4       |
| Cleavers               | <i>Galium aparine</i>          | 1-3                  | 1-4       |
| Hempnettle             | <i>Galeopsis tetrahit</i>      | 1-3                  | 1-4       |
| Russian thistle        | <i>Salsola kali</i>            | NA                   | 1-4       |
| Turnipweed             | <i>Rapistrum rugosum</i>       | 1-3                  | 1-4       |
| Scentless chamomile    | <i>Matricaria inodora</i>      | 1-3                  | 1-4       |
| Sunflower              | <i>Helianthus annuus</i>       | 1-3                  | 1-4       |
| Broadleaves Suppressed |                                | Weed Height (inches) |           |
| Flixweed               | <i>Descurania sophia</i>       | 1-3                  | 1-4       |
| Pigweed                | <i>Amaranthus retroflexus</i>  | 1-3                  | NA        |
| Russian thistle        | <i>Salsola kali</i>            | 1-3                  | NA        |
| Common vetch           | <i>Vicia sativa</i>            | 1-3                  | 1-4       |
| Storksbill             | <i>Erodium cicutarium</i>      | 1-3                  | 1-4       |
| Purslane               | <i>Portulaca oleracea</i>      | 1-3                  | 1-4       |
| Annual knawel          | <i>Scleranthus annuus</i>      | 1-3                  | 1-4       |
| Lambsquarters          | <i>Chenopodium album</i>       | 1-3                  | 1-4       |
| Cowcockle              | <i>Vaccaria pyramidata</i>     | 1-3                  | 1-4       |
| Common ragweed         | <i>Ambrosia elatior</i>        | 1-3                  | 1-4       |

ALS-resistance exists in some weed biotypes. These biotypes will not be controlled by Hussar® Herbicide. Consider using herbicides with other modes of action. When applying Hussar® Herbicide in spring applications to winter wheat, allow weeds to recover from cold weather and start active growth.

### TANKMIXES

For broad-spectrum control of both annual grass and broadleaf weeds, Hussar® Herbicide may be mixed with the herbicides listed below. With all tank-mix partners, read and follow use directions, rates, precautions, timing and growth stage limitations, recropping restrictions, grazing interval restrictions, and directions on herbicide and surfactant labels. A non-ionic surfactant is always required with Hussar® Herbicide (see *Surfactant* section).

7 of 10

## Tank Mixture Partners

|                             |                          |                     |
|-----------------------------|--------------------------|---------------------|
| 2,4-D amine*                | Harmony® Extra Herbicide | Osprey Herbicide    |
| Axial™ XL Herbicide         | Hoelon® 3EC Herbicide    | Puma® 1EC Herbicide |
| Buctril® Herbicide          | Maverick® Herbicide      | Rimfire™ Herbicide  |
| Bronate Advanced™ Herbicide | MCPA amine               | Stinger™ Herbicide  |
| Curtail® M Herbicide        | MCPA LV ester            |                     |
| Dicamba <sup>1</sup>        | Olympus™ Herbicide       |                     |
| Discover® Herbicide         | Olympus™ Flex Herbicide  |                     |

\* Applications must be made when weeds are no larger than 3 inches in height.

<sup>1</sup> Banvel/Clarity types.

## COMPATIBILITY

If Hussar® Herbicide is to be tank mixed with other herbicides, compatibility should be tested prior to mixing. To test for compatibility, use a small container and mix a small amount (0.5 to 1qt) of spray solution, combining all ingredients in the same ratio as the anticipated use. If any indications of physical incompatibility develop, do not use this mixture for spraying. Indications of incompatibility usually occur within 5-15 minutes after mixing. Read and follow the label of each tank mix product used for precautionary statements, directions for use, geographic and other restrictions. Indications of incompatibility include separation in the mix, and either clumping or clabbering of the mixture.

## MIXING INSTRUCTIONS

Ensure the spray tank is clean. In-line strainers and nozzle screens should be clean and 50 mesh or coarser.

1. Fill the spray tank 1/4 to 1/2 full with clean water and begin agitation or bypass.
2. Add the appropriate rate of Hussar® Herbicide, as determined under *Application Rates*, directly to the spray tank. Maintain sufficient agitation during both mixing and application.
3. Add the broadleaf weed herbicide.
4. Add the surfactant.
5. Fill the spray tank with balance of water needed.
6. Maintain sufficient agitation during both mixing and application of Hussar® Herbicide.

## RE-SUSPENDING WG PRODUCTS IN SPRAY SOLUTION

Hussar® Herbicide may settle if left standing without agitation. If the spray solution is allowed to stand for one hour or more, re-agitate the spray solution for a minimum of 10 minutes before application.

## TANK CLEANUP PROCEDURE

1. Drain the tank completely, and then wash out tank, boom and hoses with clean water. Drain again.
2. Half fill the tank with clean water and add ammonia (i.e., 3% domestic ammonia solution) at a dilution rate of 1% (i.e., 1 gallon of domestic ammonia for every 100 gallons of rinsate). Complete filling of the tank with water. Agitate/recirculate and flush through boom and hoses. Leave agitation on for 10 minutes. Drain tank completely.
3. Repeat step 2
4. Remove nozzles and screens and soak them in a 1% ammonia solution. Inspect nozzles and screens and remove visible residues.
5. Flush tank, boom, and hoses with clean water.
6. Inspect tank for visible residues. If present, repeat step 2.

## SPRAY DRIFT MANAGEMENT

Do not apply by aerial application. Hussar Herbicide is not volatile. Damage to sensitive non-targeted plants can occur as a result of spray drift. Spray drift can be managed by several application factors and by spraying in the proper climatic conditions. Because of this, spray drift to sensitive crops is the responsibility of the applicator.

### Spray Drift Factors

1. Droplet size should be between 250-350 microns. As droplet size increases, spray coverage to the weeds is usually sacrificed. Droplet size selection should be dictated by the nearness of sensitive crops, climatic conditions and weed pressures. Large droplets will not prevent drift if applications are made under improper conditions.
2. Higher water volumes (GPA) allows more opportunity to use larger droplets size, greater flexibility to lower spray pressure and the use of slower traveling speeds all of which contribute to lowering spray drift potential.
3. For ground boom applications, apply with nozzle height no more than 4 feet above the ground or crop canopy. Using wider angled nozzles allows the boom to remain closer to the crop.
4. Choosing nozzles that control droplet size or adding drift control agents to manage drift can reduce herbicide efficacy, but may be necessary in areas where sensitive crops are near.

5. Do not make applications of Hussar® Herbicide when wind speeds are outside 3 to 10 mph.
6. Hot and dry conditions can result in evaporation of droplets prior to reaching crop canopy. Increase droplet size under these conditions.
7. Drift potential is at its maximum when a temperature inversion exists. Spraying when a temperature inversion exists can result in droplets traveling several miles off target and causing severe injury to desirable vegetation. Consult your local extension agent for proper detection of temperature inversions.
8. Using shielded sprayers can reduce the impacts of wind on droplet movement. When using shielded sprayers one must ensure that spray patterns are not being impacted by improper shield placement. Shielded sprayers do not allow applications in excessive wind.

### ROTATIONAL CROP RESTRICTIONS

Hussar® Herbicide breakdown in the soil is due mainly to microbial activity. It can be affected by soil temperature, pH, and moisture. Conditions that accelerate the breakdown of Hussar® Herbicide include low soil pH, adequate soil moisture and adequate soil temperature to support microbial activity. Likewise, Hussar® Herbicide breakdown can be slowed under high soil pH, dry, and cold conditions. When considering crop rotations, in addition to soil pH, the soil moisture and soil temperature conditions since application should be monitored. It is not recommended that Hussar® Herbicide be used on soils with a pH greater than 7.9.

#### Oklahoma, Kansas, Nebraska, Texas, Colorado\*

| Crop                           | Soil pH              | Cumulative Precipitation (Inches) | Rotation Interval (Months) |
|--------------------------------|----------------------|-----------------------------------|----------------------------|
| Wheat                          | 7.9 or lower         | No restrictions                   | 1 day                      |
| Proso Millet                   | 7.9 or lower         | No restrictions                   | 10                         |

\* **NOTE:** In areas where a crop is not specified or the accumulated precipitation was less than specified above, conduct a field bioassay as described in the *Field Bioassay* section of the label.

### FIELD BIOASSAY

A field bioassay must be conducted for crops not listed on this label and for crops where cumulative precipitation requirements are not satisfied or for crops listed on the label for which a shorter plant-back interval than listed is desired.

To conduct a field bioassay, plant strips of the crop you want to grow the season following Hussar® Herbicide application. Monitor the crop for response to Hussar® Herbicide to determine if the crop can be grown safely in previously treated Hussar® Herbicide areas.

## PREHARVEST INTERVAL INFORMATION

Wheat may be harvested for grain and straw within 55 days of Hussar® Herbicide application. Wheat forage may be harvested 21 days after last application. Wheat hay may be harvested 50 days after last application.

## WEED RESISTANCE

Hussar® Herbicide is an acetolactate synthase (ALS) inhibiting herbicide. Some weed populations may contain plants naturally resistant to Hussar® Herbicide or other herbicides with the same mode of action (ALS/AHAS enzyme inhibitors). Repeated use of herbicides with the same mode of action allows resistant weeds to spread. To manage the spread of resistant weed populations, use herbicides with different modes of action in tankmixture, rotation, or in conjunction with alternate cultural practices.

The use of Hussar® Herbicide should conform to resistance management strategies established for the use area. Consult your agricultural advisor for resistance management strategies and recommended pest management practices for your area.

## USE PRECAUTIONS

- Hussar® Herbicide is rainfast 6 hours after application to most weed species. Rainfall within 6 hours may necessitate retreatment or may result in reduced weed control. Applications should be made to actively growing weeds. Weed control may be reduced if application is made when weeds are dust covered or in the presence of heavy dew, fog, and mist/rain or when weeds are under stress due to drought, cold temperatures, etc.
- Do not apply to wheat not actively growing due to cold and wet conditions or drought stress.
- Use the spray adjuvants recommended on this label.

## USE RESTRICTIONS

- Do not apply to any crop other than wheat.
- Do not apply Hussar® Herbicide to wheat undersown with grass and legume species.
- Do not apply when wind causes drift to off-site vegetation as injury may occur. Small amounts of Hussar® Herbicide via drift or tank contamination can cause severe damage to all other crops other than wheat and barley. Careful management of spray drift and tank cleanout is required.
- In order to minimize risk to non-target plants, do not apply when the wind direction is toward sensitive areas (bodies of water, known habitats for threatened or endangered plants, areas designated for ecological preservation) that are immediately adjacent to the treatment area and leave a 15 ft buffer between the application area and an adjacent sensitive area.
- The maximum amount of iodosulfuron-methyl-sodium active ingredient allowed is 0.009 lb per acre and is equivalent to 2.85 oz of Hussar Herbicide per acre. All herbicide products containing this active ingredient used on the same acre, contribute to the maximum amount of iodosulfuron-methyl-sodium allowed. Do not exceed 0.009 lb iodosulfuron-methyl-sodium per acre in total from all products used in a 365 day period.
- Up to 2 applications may be made per 365 days. A repeat application may be made after 14 days, but do not exceed 2.85 oz of Hussar Herbicide per acre per 365 days.
- Wheat may be harvested for grain and straw 55 days after Hussar® Herbicide application. Wheat forage may be harvested 21 days after last application. Wheat hay may be harvested 50 days after last application.
- Do not apply this product by aerial application.
- Do not apply this product through any type of irrigation system.
