kills mosquitos

Insect Kill Strip

Use in animal shelters, homes,
cabins, garages, and milk rooms.
Controls flies, mosquitoes,
gnats and other small flying insects.

DIRECTIONS FOR USE

Animal Buildings & Milk Rooms: To control flies, mosquitoes, gnats, and other small flying insects in barns, stalls, calf pens, milk rooms, bulk milk storage rooms, stables, feed rooms, dog kennels, poultry houses, and other farm buildings, suspend 1/2 inch wide Insect Kill Strip for each 100 cubic feet of volume. If insects are already present, double the amount. Use in areas where the weather or other conditions may cause the strips to lose their effectiveness. For this to be most effective, up to 4 inches of fresh water should be available. Do not use in hot water, food, or drink areas and drains.

Homes & Cabins: To control flies, mosquitoes, gnats, and other small flying insects in homes, cabins, and other buildings, hang 1/2 inch wide Insect Kill Strip in areas where the insects are most likely to be found in greatest numbers. This is effective for four months. Replace strip if effectiveness is reduced. For control of flies, gnats, mosquitoes, and other small flying insects in areas where the weather or other conditions may cause the strips to lose their effectiveness, use double the amount.

Catch Basins: To control flies, mosquitoes, gnats, and other small flying insects in catch basins, hang 1/2 inch wide Insect Kill Strip above the basin. This is effective for four months. Replace strip if effectiveness is reduced. For control of flies, gnats, mosquitoes, and other small flying insects in areas where the weather or other conditions may cause the strips to lose their effectiveness, use double the amount.

CAUTION:

- Avoid contact with skin.
- Do not use in hot water, food, or drink areas and drains.
- Do not use in areas where children or pets may be present.
- Do not use in areas where the weather or other conditions may cause the strips to lose their effectiveness.
- Do not use in areas where the strips may be damaged by moisture.
- Do not use in areas where the strips may be damaged by heat.
- Do not use in areas where the strips may be damaged by sunlight.
- Do not use in areas where the strips may be damaged by other factors.
